Section I: Introduction

AccuRoute features are accessible where the users need them most—on the web, office machines, multi-function devices, and business systems that are an integral part of the communication workflow.

This guide contains instructions for deploying the AccuRoute Embedded Device Client to multi-function devices.

Note This guide is written for system administrators with detailed knowledge of the AccuRoute server and the devices.

This section of the guide includes:

Overview of AccuRoute Embedded Device Client (I-I)

Main components of the environment (I-4)

Installation components (1-5)

Document workflow (1-5)

Deploying AccuRoute Embedded Device Client (1-9)

Related documentation (1-9)

Procedures for installation, configuration, and testing are provided in the remainder of this document.

Overview of AccuRoute Embedded Device Client

The AccuRoute Embedded Device Client brings the versatile document routing capabilities of AccuRoute to supported devices. These capabilities are founded in Upland AccuRoute's Distribution Rule technology.

The AccuRoute Embedded Device Client runs on OXP (Open Extensibility Platform), an ASP.NET layer sitting between the device and the AccuRoute server. It communicates between the OXP SDK installed on the device and the AccuRoute server via the Embedded AccuRoute for Intelligent Device Client application.

Figure 1-1: AccuRoute scanning features on the HP device running AccuRoute Embedded Device Client

© 2018 by Omtool, Ltd. (Upland AccuRoute) All rights reserved. Omtool, AccuRoute and the Company logo are trademarks of the Company. Trade names and trademarks of other companies appearing in this document are the property of their respective owners.

Each feature has a unique function that is detailed in the following table. (To see how each feature works on the device, go to <u>Section 10: Testing</u>, for the complete screen sequence of each feature.)

| Feature | Description | Login required | Notes |
|---|---|-------------------|---|
| Fax | This option allows the user to perform a walk-up fax. The user enters the fax number and can additionally add a cover page to fax. The device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The AccuRoute server sends the fax to the intended recipients. | No | |
| Fax Release | This option allows the user to hold or release and print faxes as needed. The user selects the Fax Release button and logs in to the device. Once they enter the Fax number of interest, they can Enable Manual Hold to override the current print schedule, release an existing Manual Hold or Print Pending Jobs (all the faxes currently in queue for the selected fax number). | Yes | The user account associated with this feature must have access to the Administration Node on the Web Client, where they can configure Fax Release Schedule Calendars. |
| Personal Distributions | The user selects Personal Distributions, logs in to the device, and selects a personal distribution option or Distribution Rule. The device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The server decodes the Distribution Rules and distributes the document to the intended recipient. | Yes | The device user must be able to create Distribution Rules. This requires access to AccuRoute Web Client (where the user can create the Distribution Rules and Routing Sheets). |
| Public Distributions | The user selects Public Distributions and then selects a public distribution option or Distribution Rule. The device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The server decodes the Distribution Rules and distributes the document to the intended recipient. | No | Public distribution options are associated with a special user account that is set up for this purpose. The user account associated with this feature must be able to create Distribution Rules. This requires access to AccuRoute Web Client (where the user can create the Distribution Rules and Routing Sheets). |
| Personal Distributions | The user selects Personal Distributions, logs in to the device, and selects a Personal Distribution option, or Distribution Rule. The device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The server decodes the Distribution Rules and distributes the document to the intended recipient. | Yes | The device user must be able to create Distribution Rules. This requires access to AccuRoute Web Apps User Interface (where the user can create the Distribution Rules and Routing Sheets). |
| Routing Sheet | After the user selects Routing Sheet, the device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The server then decodes the Distribution Rule and distributes the document to the intended recipients. | No | The device user must be able to generate Routing Sheets. This requires access to AccuRoute Web Client (where the user can create the Routing Sheets). |
| Scan to Destination (formerly Scan to Folder, see Notes) | The device scans and delivers the document to the AccuRoute folder via HTTP/HTTPS protocol. The server picks up the scanned document from the network folder, processes it, and delivers it to the intended folder. | No | If you previously used "Scan to Folder" for this button, you must change the display text of the Scan to Destination button. This is described in <u>Configuring button properties</u> (4-12) during the device configuration. |

Table 1-1: AccuRoute scanning features in AccuRoute Embedded Device Client

^{© 2018} by Omtool, Ltd. (Upland AccuRoute) All rights reserved. Omtool, AccuRoute and the Company logo are trademarks of the Company. Trade names and trademarks of other companies appearing in this document are the property of their respective owners.

| Feature | Description | Login required | Notes |
|-------------------------|--|-------------------|---|
| Scan to Distribution | After the user selects Scan to Distribution, the device scans and delivers the documents to a configured distribution. | | |
| Scan to Folder | The device scans and delivers the document to a folder (Dropbox, FTP or network folder share) predetermined by your system administrator. The AccuRoute server picks up the scanned document from the network folder, processes it and delivers it to the intended folder. | No | |
| Scan to Me | The user selects Scan to Me and logs in to the device. The device scans and delivers the document to the AccuRoute server via HTTP/HTTPS protocol. The server processes the document using the device user's personal Scan to Me directive and distributes the document to the intended recipients. Or, the scanned document is emailed to the sender (the default). | Yes | Scan to Me is an advanced feature of AccuRoute Web Client. It enables the server to process all AccuRoute messages from the same user with the same Distribution Rule. Scan to Me requires access to AccuRoute Web Client (where the user can create the Distribution Rules and Routing Sheets). In addition, Scan to Me must be configured in the AccuRoute Web Client and on the server. For more information on this feature, consult <u>Configuring button properties</u> (4-12). |
| Scan to My Files | The user selects Scan to My Files button and logs in to the device. The device scans and delivers the document to the AccuRoute server (via HTTP/ HTTPS protocol) where it is processed and distributed to the My Files section of the user Web Client client. | Yes | All jobs scan. |
| Mobile Reservations | The user selects the Mobile Reservations button and enters a Mobile Scan Reservation Code generated by the Mobile Client. The device decodes the reservation code and distributes the document to the intended recipients. | No | Mobile Reservations are generated by the Mobile Client and require a Mobile Client license. |
| Nested Buttons | The Nested Buttons feature provides the ability to configure one top-level button that all other AccuRoute buttons will display under, minimizing the front panel home screen real estate. For example, one button can be configured and labeled "AccuRoute." This button would be the only AccuRoute button to display on the home screen. Pressing this button would then display any other enabled buttons (such as Routing Sheets, Personal Distributions, etc.). | Yes | Login is required only if using Device Authentication and if one of the Nested Buttons needs authentication. |
| Device Information | This option allows users to access a screen of detailed information about the multi-function printer (MFP) with which they're working, including the device name, hostname, IP address, serial number, fax number, inbound/outbound fax support, and business unit. | No | Users can print the screen information to the device. |

Table 1-1: AccuRoute scanning features in AccuRoute Embedded Device Client

| Feature | Description | Login required | Notes |
|------------|---|-------------------|---|
| Job Queue | You can use the Job Queue option to obtain a list of jobs submitted to the AccuRoute server from a specific MFP or by a specific user. For all users, Job Queue can provide a list of all previously scanned jobs from an MFP or all faxes sent from the device. The system administrator configures the type of items that can be reported. For authenticated users, Job Queue can list any previously faxed items associated with the logged-in user. | Optional | Users can select any job from the list and print the job details to the device. |
| MyMessages | The MyMessages button offers authenticated users the ability to view and print their messages, including faxes. The system administrator defines the scope of message organization options available for users. | Yes | |

| Table 1-1: AccuRoute | scanning features | s in AccuRoute | Embedded Device Client |
|----------------------|-------------------|----------------|-------------------------------|
|----------------------|-------------------|----------------|-------------------------------|

Main components of the environment

The AccuRoute Embedded Device Client environment consists of the following components.

- AccuRoute Server The AccuRoute server is the main back end server for processing and routing documents.
 - **Note** AccuRoute v6.1 installs the AccuRoute Intelligent Device Client as part of the server installation. No separate installation of this component is required unless the AccuRoute Embedded Device Client is installed on a remote system, and then the AccuRoute Intelligent Device Client would be installed on the remote system as well.
- AccuRoute Embedded Device Client See <u>Section 3: Installation</u> for installation instructions.
- HP Device See <u>Supported devices</u> (2-1) for a list.

Installation components

The AccuRoute Embedded Device Client setup includes multiple components detailed in this table.

Table 1-2: Description of installation components with locations and functions

| Component | Location | Function |
|---|--|--|
| AccuRoute Embedded Device Client Install | [ServerInstallFolder]\Clients | The setup contains the setup.exe file for the AccuRoute Embedded Device Client. Use this file to install the AccuRoute Embedded Device Client. |
| AccuRoute Embedded Device Client Configuration Manager | Devices node in the AccuRoute Server Administrator. | The Device Client Configuration node is a management tool installed with the AccuRoute Server Administrator, and is used to manage settings and options that will be available on the device. |
| | | Note: A device license must be installed in order for the Device Client Configuration manager node to be used. |

Document workflow

The workflow that moves a document from the device to its final destination involves the user, the device, the AccuRoute Embedded Device Client, Embedded AccuRoute for Intelligent Devices (Omtool ISAPI web server extension), and the AccuRoute server. An understanding of this workflow can be helpful in troubleshooting AccuRoute Embedded Device Client integration.

In its most basic workflow, when a device user scans a document, the device submits the document to the AccuRoute Embedded Device Client via HTTP/HTTPS protocol. The AccuRoute Embedded Device Client then routes the document to the AccuRoute server via HTTP/HTTPS protocol. The Dispatch component applies rules to the message and the AccuRoute server processes the message and routes it to the intended recipients.

Workflow for the Fax, Routing Sheet, Scan to Destination, and Scan to Distribution features

Figure 1-2: Workflow for Fax, Routing Sheet, Scan to Destination, and Scan to Distribution

A - An inbound fax arrives at

the AccuRoute server and

matches to a device listed in

the Destination Translation Table (DTT) that has either a

calendar-based or manual hold set. The fax remains queued on the server. **B** - At the device, the user authenticates and either releases the document to be

printed or leaves it in a "hold"

state.

Workflow for the Fax Release feature

Figure 1-3: Workflow for Fax Release

Workflow for the Personal Distributions, Public Distributions, Scan to Me, and Scan to My Files features

When a user begins a scan session with one of these options, the device requests the AccuRoute Embedded Device Client to retrieve Distribution Rules.

Note For Personal Distributions, Scan to Me, and Scan to My Files, the device user must authenticate himself at the device using the configured authentication type. See <u>Configuring authentication</u> (4-6).

The AccuRoute Embedded Device Client then submits a request to Embedded AccuRoute for Intelligent Devices (Omtool ISAPI web server extension) which retrieves the data from the AccuRoute server and supplies it to the AccuRoute Embedded Device Client. As soon as the AccuRoute Embedded Device Client returns the data to the device, the workflow resumes.

A - The user selects the Personal, Public Distribution, Scan to Me, or Scan to My Files feature. (If the user chooses Personal Distribution, he logs into the device.) The device requests the list of Distribution Rules from the server. The AccuRoute server returns the requested data. The user selects a Distribution Rule from the list and scans the document.

B - The device delivers the document to the AccuRoute Embedded Device Client via HTTP or HTTPS protocol.

C - AccuRoute Embedded Device Client sends the document to Embedded AccuRoute for Intelligent Devices (Upland AccuRoute ISAPI Web Server Extension) via HTTP/HTTPS protocol which in turn routes the document to the AccuRoute server.

D - The Dispatch component applies rules to the message, and the server processes the message accordingly.

Deploying AccuRoute Embedded Device Client

- I Complete the installation requirements. (Section 2: Requirements)
 - **Note** If you are planning to use HTTPS protocol, you must create a CA certificate before installing the AccuRoute Embedded Device Client. Refer to the description of setting up a CA certificate using Microsoft Certificate Services and enabling SSL in <u>Section 3: Setting up a CA Certificate and SSL</u> (3-1).
- 2 Install the AccuRoute Embedded Device Client. (Section 3: Installation)
- 3 Configure the embedded Web Server of the device. Refer to the description of required configuration in the AccuRoute[®] Server Installation and Integration Guide, which is available through <u>http://</u>www.omtool.com/documentation/accuroute/6.1/ Configure the AccuRoute server. Refer to the description of configuring the server in the AccuRoute[®] Server Installation and Integration Guide, which is available through <u>http://www.omtool.com/documentation/accuroute/6.1/</u>.
- 4 Configure optional capabilities. Refer as needed to
 - a (Section 6: Configuring HP MFP Devices)
 - **b** (Section 8: Configuring HP FutureSmart, OZ, and Pro Devices to Use the OPS Server Certificate for HTTPS environments)
 - c (Section 7: Configuring Samsung Devices)
 - d (Section 10: Configuring HP S900 Series MFP Devices)
 - e (Appendix: Configuring HP Pro Devices on a Remote OPS Server with HTTPS Support)
- 5 Test the AccuRoute scanning features on the device. (Section 10: Testing)
- 6 Troubleshoot the setup, if necessary. (Section 11: Troubleshooting)

- AccuRoute Embedded Device Client Quick Start Guides

Note The quick start guides have been designed to be posted near the device, distributed to device users, and published on your organization's intranet.

For all documentation related to AccuRoute v6.1, consult the AccuRoute v6.1 documentation page.

Section I: Introduction

© 2018 by Omtool, Ltd. (Upland AccuRoute) All rights reserved. Omtool, AccuRoute and the Company logo are trademarks of the Company. Trade names and trademarks of other companies appearing in this document are the property of their respective owners.

Section 2: Requirements

This section includes:

Supported devices (2-1)

AccuRoute server requirements (2-1)

Device authentication requirements (2-2)

Supporting large color documents (2-2)

Planning for Device Deployment (2-4)

Supported devices

AccuRoute supports the AccuRoute Embedded Device Client on HP, Samsung, Xerox, and Ricoh devices.

For lists of supported devices, including models and firmware specifications, refer to the device-specific chapters:

- Section 6: Configuring HP MFP Devices (6-1)
- Section 7: Configuring Samsung Devices (7-1)
- Section 7: Configuring Xerox Devices (7-1)

For more information on Ricoh devices, see the Embedded AcuRoute for Ricoh (ESA) Device Client Installation Guide.

AccuRoute server requirements

The AccuRoute Embedded Device Client requires:

- □ AccuRoute server v6.1
 - with appropriate device license
 - fax-enabled to support fax-based features
- At least one fax-enabled connector to support fax-based features
- AccuRoute ISAPI Device Client (included with default server install)
- ASP.NET 3.5.1

Note To allow the installation prerequisite process to install Microsoft .NET 3.5.1, the system must have internet access. Microsoft .NET 3.5.1 is required to install the device client application.

Device authentication requirements

The AccuRoute Embedded Device Client supports the following authentication methods. Some of these require setup prior to using the device for scanning. It is recommended that an authentication is selected and verified before installing the device client. Refer to the AccuRoute Server Installation Guide (AccuRoute v6.1 documentation page).

The types of authentication are:

- **Device** authentication uses the native authentication built into the device. This is configurable from the Embedded Web Server.
- Email authentication occurs when a user logs into the device with a valid email address that was created in Active Directory.
- Login authentication occurs when a user logs into the device with a user name and password as defined in the Active Directory.
- Pin authentication displays on the device a text box into which a user enters a PIN login.
 - Note PIN refers to an attribute of Active Directory and it can be changed to point to any other Active Directory field by modifying the LDAP Lookup Settings Filter field values on the **Authentication** tab of the **Device Group Properties.** The default attribute is set to use **employeeID**.
 - **Note** HP Pro Devices do not support the Device authentication method on their own and will require a stacked solution with another authentication service installed. For example: HP AC authentication set in the Pro device when Device authentication is set in AccuRoute.

Supporting large color documents

The following configuration changes increase the success rate for large document scanning.

To support large color documents, you must adjust settings as follows:

- Increase the **Sleep Schedule** from 10 minutes to the maximum, which is 4 hours.
- Increase the Inactivity Timeout in the device Embedded Web Server to 300 seconds.
- Increase the Maximum allowed content length value for Request Filtering to its maximum of 4294967295.
- Increase the ASP > Session Properties > Time-out value in Internet Information Service Manager (IIS).

Sleep Schedule

To increase the **Sleep Schedule**:

- I Log in to the Embedded Web Server on the MFP.
- 2 Select the **General** tab and locate the **Sleep Schedule** section in the left pane.
- 3 Increase the Sleep Delay value to the maximum allowable time 120 minutes.
- 4 Click Apply.

Inactivity Timeout

To increase the **Inactivity Timeout** in the device Embedded Web Server:

- I Log in to the Embedded Web Server on the MFP.
- 2 Select the General tab and locate the Control Panel Administration menu.
- 3 Select Administration and click Display Settings.
- 4 Increase the **Inactivity Timeout** value to 300 seconds.

Request Filtering and Content Length

You need to set the **Request Filtering** value to its maximum of 4294967295. The **Content Length** must be modified on the DeviceClient, OXPd I.6 and WebAPI sites.

To adjust the **Content Length** and **Request Filtering** settings in IIS:

- I Open Internet Information Services (IIS 7) Manager.
- 2 Select DeviceClient or OXPd 1.6 under Sites.
- 3 Double-click on Request Filtering.
- 4 Select Edit Feature Settings under the Actions menu.
- 5 Increase the value in **Maximum allowed content length**. The default is 30000000 and it must be increased to 4294967295.
- 6 Click OK.

Note Repeat steps 2-5 for WebAPI.

7 Reset IIS.

ASP Session Properties

To change the **ASP Session** settings in IIS:

- I Open Internet Information Services (IIS 7) Manager.
- 2 Select Sites > DeviceClient.
- 3 Double-click **ASP**.
- 4 Under Services, double-click Session Properties.
- **5** Increase the **Time-out** value to 1:20:00. The default is :20:00.
- 6 Click Apply.
- 7 Restart IIS.

Planning for Device Deployment

Before you begin installing and configuring your device environment, it is recommended that you review and plan your device configuration. For example, you may want to consider:

- Whether you will group your devices by model, location or functionality.
- If you want to use a Local or Remote IIS server configuration.
- Whether your OPS server is local or remote to your AccuRoute server.

Also, keep in mind that using HP Pro devices in your environment requires an OPS server installation. See <u>Configuring</u>. <u>HP Pro Devices (only)</u> (19) for more information.

Planning for HTTPS

Depending on the devices in your environment, use one of the following two supported certificate types to configure HTTPS communication between the devices and the AccuRoute server.

- With HP Pro devices, use an OPS Server certificate.
- Without HP Pro devices, use a regular generated CA Certificate using Microsoft Certificate Services.

You must create the certificate before installing the AccuRoute Embedded Device Client. This configuration is necessary to allow administrators to export the file and install it on the device to enable HTTPS communication.

Note HTTP and HTTPS cannot coexist and configuration for the device communication must be either HTTP or HTTPS for all devices.

- The administrator will need to create and export the certificate for the Web server as a file named WebServer.cer and copy it to the Certificate folder created during the AccuRoute Embedded Device Client install.
- During the registration process for the OXPd application onto the device, the WebServer.cer will be installed into the device.

Note No error will be generated if the file does not exist. It will not be possible to configure the device for HTTPS until that file has been installed onto the device. Also note, if you are using HP Pro devices, the makecert certificates are not supported.

For information on how to create a self-signed certificate using makecert.exe, refer to the description of <u>Creating</u> the certificate (14).

For information on using the OPS Server certificate, see HTTPS support using the OPS-created certificate (6-18).

Device Group Planning

The AccuRoute Server Administrator **Devices** node gives the administrator the ability to manage devices and create groups of devices with customized buttons. Refer to <u>Creating a group of devices (part 1)</u> (39).

Section 3: Installation

This section includes:

Installing the AccuRoute Embedded Device Client (3-1)

Installing the AccuRoute Embedded Device Client on a remote system (3-2)

Installing the AccuRoute Embedded Device Client

- I Log on to the system running the AccuRoute server using an account that belongs to the local Administrators group.
- 2 Navigate to the folder [ServerInstallFolder]\Clients\DeviceClient and run setup.exe.

The InstallShield wizard launches with the **Welcome** message.

- 3 Click Next. The Destination Folder page opens.
- 4 Keep the default location and click **Next**. The **AccuRoute Embedded Device Client Configuration** page opens.

| 🙀 AccuRoute Embedded Device Client | for HP OXP 1.6 | - InstallShield Wiz | ard 🗵 |
|--------------------------------------|---------------------|---------------------|--------|
| AccuRoute Embedded Device Client | for HP OXP 1.6 (| Configuration | |
| Enter the AccuRoute Intelligent Devi | ce Client Server na | ame: | |
| AR40East | | | |
| | | | |
| | | | |
| InstallShield | < <u>B</u> ack | <u>N</u> ext > | Cancel |

- 5 In the AccuRoute Intelligent Device Client Server name text box, enter the AccuRoute server name or the IP address of the AccuRoute Intelligent Device Client.
- 6 Click **Next** and you are ready to install the program.

- 7 Click **Install** to begin installation. The setup installs AccuRoute Embedded Device Client. The InstallShield Wizard shows a message indicating when the installation is complete.
- 8 Click Finish.

Continue to Section 4: Creating Device Groups on the AccuRoute Server Administrator.

Installing the AccuRoute Embedded Device Client on a remote system

- I Log on to the system where you want to install the AccuRoute Embedded Device Client using an account that belongs to the local Administrators group.
 - Note The system must be running Windows 2008 R2 SP-1 x64 or 2012 64-bit and must have Embedded AccuRoute for Intelligent Devices (Upland AccuRoute ISAPI Web Server Extension) and AccuRoute v6.1 installed.
- 2 Navigate to the \\[AccuRouteServer]\Upland\Clients\DeviceClient directory and run setup.exe.

The InstallShield wizard configures your system for installation and shows the Welcome message.

- 3 Click Next. The AccuRoute Embedded Device Client Configuration page opens.
- 4 In the AccuRoute Intelligent Device Client Server name text box, enter the AccuRoute server name or the IP address of the AccuRoute Intelligent Device Client.
- 5 Click Next.
- 6 Click **Install** to begin installation. The setup installs AccuRoute Embedded Device Client on your remote server. The InstallShield Wizard shows a message indicating when the installation is complete.
- 7 Click Finish.
- 8 Continue to Section 4: Creating Device Groups on the AccuRoute Server Administrator.

Section 4: Creating Device Groups on the AccuRoute Server Administrator

This section describes:

Creating a group of devices (4-1)

Specifying buttons for devices (4-10)

Updating the Deviceloader.xml to support new devices (4-30)

Refer to Installing Buttons on a New Device (5-1) for steps to install the buttons onto the devices.

See also <u>Section 10: Testing</u> (10-1) and the <u>AccuRoute server administrator on-line help</u> (for additional information including optional configurations, testing, and troubleshooting).

Creating a group of devices

Create a new Group for each group of devices. While each group may have the same configuration, you can configure a group to have a configuration that is completely different from another group. For example, you might create a group named "Marketing" and configure it to use only the Routing Sheets and Fax features. You might create an additional group named "Sales" and configure it for PIN authentication and the ability to use only the Routing Sheet, Personal Distributions, and Scan to Me features.

The following sections describe

- <u>Creating a group</u> (4-1)
- <u>Configuring authentication</u> (4-6)

Creating a group

- I Click Start > All Programs > Upland > AccuRoute Server Administrator.
- 2 In the console tree, expand the AccuRoute server.
- 3 Go to the **Devices** node.
- 4 Right-click and select New > Embedded Device group.

Section 4: Creating Device Groups on the AccuRoute Server Administrator

| 🚟 server - [Console Root] | |

| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | OK Cancel |

• If you are configuring for HTTPS, change the URL path from HTTP to HTTPS. For example:

Application URL: https://FQDN/DeviceClient/ Web API: https://FQDN/WebAPI/Scripts/omisapiu.dll

- If you are configuring a device group of HP Pro devices, confirm the IP address of the OPS Server in the **OPS Server** field.
- For remote systems If you installed the AccuRoute Embedded Device Client on a remote system, you must manually enter the IP address of that system in the URL field.
- If you are using a local OPS server and an OPS-created certificate for HTTPS environments, change the Application and WebAPI's URLs to https://IP address or FQDN name to match the OPS server. Then continue on to the following sub-sections: <u>Creating an SSL binding</u> (4-3) through to <u>Editing the OmISAPIU.xml file</u> (4-5).

Otherwise, continue the procedure below at <u>Configuring authentication</u> (4-6).

Important The following sub-sections are for users with a local OPS server and an OPS-created certificate for HTTPS environments.

Creating an SSL binding

- I Open the IIS Manager.
- 2 Click on the **Default Web Site** and locate **Bindings** under **Edit Site** (top right corner of the window).
- 3 Click on Bindings. The Site Bindings dialog opens.

- 4 Click on HTTPS type and select Edit. The Edit Site Bindings dialog opens.
- 5 In the SSL certificate drop-down, choose the certificate that was created earlier and click OK.
- 6 Click Close to close the dialog.

Requiring SSL for the virtual web sites

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select OXP DeviceClient.
- 3 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.
- 4 Expand Local machine > Default Web Site and select WebAPI.
- 5 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.

Verifying the SSL binding

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select WebAPI.
- 3 Click on Browse *:443 (HTTPS) under Manage Application/Browse Application (located at the top right corner of the IIS dialog). You will see this message:

There is a problem with this web site's security certificate.

Note This message is expected and safe to ignore.

- 4 Click the **Continue to this website (not recommended)** option.
- 5 Verify that the **IIS 7** dialog opens.

Enabling directory browsing in IIS

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select Embedded Device Client.
- 3 Double-click on **Directory browsing**.
- 4 In the right Actions field, select ENABLE.
- 5 Expand Local Machine > Default Web Site and select WebAPI.
- 6 Double-click on **Directory browsing**.
- 7 In the right Actions field, select ENABLE.

Verifying HTTPS browsing

- I Open the IIS Manager.
- 2 Expand the **Default Web Site**.
- 3 Expand Embedded Device Client.
- 4 Select the **Configuration** folder.
- 5 In the actions pane, select Browse*:443(https).

- 6 Select Continue to this website (not recommended).
- 7 Verify that the local page is displayed.

For the AccuRoute Embedded Device Client: .../DeviceClient/Configuration/

- 8 In the IIS Manager with **Default Web Site** expanded, expand **WebAPI**.
- 9 In the actions pane, select Browse*:443(https).
- 10 Select Continue to this website (not recommended).
- **II** Verify that the **localhost** page is displayed:

.../WebAPI/

12 Select Continue to this website (not recommended).

Editing the OmISAPIU.xml file

I Navigate to the following path.

[ServerInstallFolder]\WebAPI\WebAPI\Scripts

2 In OmISAPIU.xml, find the FileTransfer node. Replace the IP address with the fully qualified domain name. Also, change http to https.

```
<FileTransfer>https://fully_qualified_domain_name/WebAPI/
FileTransfer/
</FileTransfer>
```

Note XML files can be edited using Microsoft Notepad.

3 Save the file and continue with <u>Configuring authentication</u> below.

Configuring authentication

4-6

I Click the **Authentication** tab to specify the type of user authentication required for the group of devices.

| | 100 | Authentication Buttons Advanced | |
|-----------|-----------------------|---|------------------|
| Туре: | PIN | | <u> </u> |
| Fields: | Doma User Passv | User Entered | Properties |
| LDAP Loo | kup Se | ttings | |
| Server: | VMEL | AD.VMELAD1.COM | |
| Port: | 389 | • | |
| Search B | Base: | DC=VMELAD1,DC=COM | |
| Filter: | | (&(objectClass=user)(employeeID=[USER_NAME])) | |
| Usernam | ne: | administrator | |
| Passwor | d: | ***** | |
| Attribute | Мар: | Exchange.default.xml | • |
| 🔽 Bind | using | Vindows Generic Security Services | |
| | | Attribute Aliases | Test LDAP Lookup |
| Confirm | authe | ntication | |
| Massar | ne: 🗔 | nsqConfirmation | |

2 From the **Type** drop-down, select one of the three authentication options: **Device**, **Email**, **Login**, or **PIN**.

After you select **Device**, **Email**, **Login**, or **PIN** as the authentication type, you can define the properties for the **Domain**, **User**, and **Password** in the **Fields** section.

The following pages describe:

- Defining Domain Properties (4-7)
- Defining User Properties (4-8)
- Defining Password Properties (4-9)
- **Note** HP Pro devices do not support the Device authentication method on their own. They require a stacked solution with another installed authentication service. An example would be HP AC authentication set in the Pro device when Device authentication is set in AccuRoute.

Defining Domain Properties

To define domain properties, double-click **Domain** in the **Fields** section. The **Domain Field Properties** dialog appears:

| Domain Field Properties | × |
|--|----------------|
| Label: @authDomainLabel | |
| Default_value: | |
| • User must enter a value for Domain | |
| Enable input validation | |
| Regular Expression: | |
| Error message: @authDomainErrorText | |
| O User must select a value for Domain from one of the following: | |
| | <u>A</u> dd |
| | <u>R</u> emove |
| | Set Default |
| | ∧ v |
| C User may not enter a value for Domain | |
| \square Display the default value to the user (read-only) | |
| | |
| ОК | Cancel |

When you define a domain, you can specify a **Default value** (domain) that will be displayed at the device. In addition, you can specify one of the following:

- User must enter a value for Domain The device user will need to enter a domain for authentication during login at the device.
- User must select a value for Domain from one of the following If there are multiple domains in the environment, use this option to create a list of domains from which the user can select.
- User may not enter a value for Domain This option prohibits the user from entering a domain value. When you select this option, you can indicate that the device will Display the default value to the user (read-only). The user will see the Default value, but cannot change it.

Note Domain definition is optional for all authentication types.

Defining User Properties

4-8

To define user properties, double-click **User** in the **Fields** section. The **User Field Properties** dialog appears:

| User Field Prop | perties | × |
|----------------------|---|-------------|
| Label: | PIN | |
| Default value: | | |
| C User must er | nter a value for User | |
| 🔲 Enable ir | nput validation | |
| Regular | Expression: | |
| Error me | essage: @authUserErrorText | |
| User must se 1234 | elect a value for User from one of the following: | Add |
| 4567 | | |
| | | Remove |
| | | Set Default |
| | | ~ v |
| C User may no | t enter a value for User | |
| 🔲 Display t | he default value to the user (read-only) | |
| | ОК | Cancel |

When you define a user, you can specify a **Default value** (user) that will be displayed at the device. In addition, you can specify one of the following:

- User must enter a value for User The device user will need to enter a user for authentication during login at the device.
- User must select a value for User from one of the following If there are multiple users in the environment, use this option to create a list from which the user can select.
- User may not enter a value for User Do not select this option if you are using Email, Login, or PIN authentication. This option prohibits the user from entering a user value.

When you select this option, you can indicate that the device will **Display the default value to the user (read-only)**. The user will see the **Default value**, but cannot change it.

Click **OK** to return to the **Device Group Properties** page.

Note User definition is required for Login authentication and optional for all other authentication types.

Defining Password Properties

To define user properties, double-click **User** in the **Fields** section. The **Password Field Properties** dialog appears:

| Password Field | Properties | × |
|----------------|---|-------------|
| Label: | PW | |
| Default value: | | |
| • User must e | nter a value for Password | |
| 📃 Enable i | nput validation | |
| Regular | Expression: | |
| Error me | @authPasswordErrorText | |
| O User must se | elect a value for Password from one of the following: | |
| | | Add |
| | | Remove |
| | | Set Default |
| | | ^ V |
| C User may no | t enter a value for Password | |
| 🔲 Display t | he default value to the user (read-only) | |
| | | |
| | ОК | Cancel |

When you define a password, you can specify a **Default value** (password) that will be displayed at the device. In addition, you can specify one of the following:

- User must enter a value for Password The device user will need to enter a password for authentication during login at the device.
- User must select a value for Password from one of the following If there are multiple passwords available in the environment, use this option to create a list from which the user can select.
- User may not enter a value for Password This option prohibits the user from entering a password. Use this option only when PIN authentication is used without a password. Do not select this option if you are using Email, Login, or PIN (with password) authentication.

When you select this option, you can indicate that the device will **Display the default value to the user (read-only)**. The user will see the **Default value**, but cannot change it.

Note Password definition is required for Login authentication and optional for all other authentication types.

3 After you define **Domain**, **User**, and/or **Password** properties, click **OK** to return to the **Device Group Properties** page. For example

| New Group | | | | × |
|-----------------------------|--------------------------|--|--------------|------------|
| General Setting | gs Authentication Butte | ons Advanced | | , |
| Type: Email | | | • | |
| Fields: Dom User Pass | | User Entered User Entered User Entered | | Properties |
| LDAP Lookup S | ettings | | | |
| Server: VMEL | AD.VMELAD1.COM | | | _ |
| Port: 389 | • | | | |
| Search Base: | DC=VMELAD1,DC=COI | м | | |
| Filter: | (&(objectClass=user)(pro | xyAddresses=SMTP:[U | ISER_NAME])) | |
| Username: | | | | |
| Password: | | | | |
| Attribute Map: | Exchange.default.xml | | | • |
| 🔽 Bind using | Windows Generic Securi | ty Services | | |
| | | Attribute Aliases | Test LD | AP Lookup |
| Confirm authe | entication | | | |
| Message: 🧔 | PmsgConfirmation | | | |
| | | | ОК | Cancel |

- 4 At the LDAP Lookup Settings section, in the Username text box, enter the name of a Windows user who has permissions to query the active directory.
- 5 In the **Password** text box, enter the Administrator password.
- **6** Select the **Confirm authentication** option if you want to display a prompt on the device to verify the user's information when authenticating.

Continue with Specifying buttons for devices (4-10).

Specifying buttons for devices

Having created one or more device groups and set up authentication, you can add and configure specific buttons for your devices.

- Adding new buttons (4-11)
- <u>Configuring button properties</u> (4-12)

Adding new buttons

I In **New Group Properties**, click the **Buttons** tab to add and/or remove buttons that appear on the device.

| New Group General Settings Authentication Buttons Advanced Device Home Screen — Routing Sheet | Properties Add Remove |
|--|-----------------------------|
| Add Button | Move |
| Type: Name: Fax Fax Release Mobile Reservation Nested Button Personal Distributions Public Distributions Routing Sheet Scan to Destination Scan to Distribution Scan to Folder Scan to me | |
| | OK Cancel |

Note It is best to add or remove buttons before installing to the device. Otherwise, if you add or remove buttons, or if button text is modified, it will be necessary to uninstall and run the installation again.

2 To add a button, click Add. The Add Button dialog is displayed.

| Add But | ton | | | × |
|---------|-----|--|----|----------|
| Type: | | | | • |
| Name: | | | | |
| | | | OK | Cancel |

Note If the **Add** button is not active, click on **Device Home Screen**.

3 From the **Type** drop-down, select a button type.

| Add Bul | ton 🗶 |
|---------------|--|
| <u>T</u> ype: | Routing Sheet |
| <u>N</u> ame: | Fax Nested Button Personal Distributions Public Distributions |
| - | Routing Sheet Scan to Destination |
| | Scan to Distribution Scan to me |

4 Enter a **Name** for the button. Then, click **OK**.

Continue with Configuring button properties.

Configuring button properties

You need to configure and define properties for each button that you add. <u>General Properties</u> are required for all buttons.

For some buttons, you need to define button-specific properties or make configuration changes. For more details, see:

- Personal and Public Distributions (4-14)
- <u>Scan to Distribution</u> (4-15)
- <u>Fax</u> (4-17)
- Routing Sheet, Scan to Destination, Scan to Distribution, Scan to Me, and Scan to My Files (4-19)
- Fax Release (4-21)
- <u>Job Queue</u> (4-24)
- Device Information (4-25)

If you are not adding one of the button types listed above, after defining General properties, continue with

- Defining Prompts (4-27)
- Defining Device Settings (4-28)
- Defining Advanced Device Settings (4-29)

General Properties

I From the **Buttons** tab of **Group** properties, highlight a button on the list and click **Properties**.

| Button Proper | rties 🗙 |
|---------------|---|
| General Jot | b Properties Prompts Device Settings |
| Туре: | Scan to me |
| Name: | Scan to me |
| Display Text: | @buttonscantomeText |
| Description: | @buttonscantomeDesc |
| Image: | scantome |
| Location: | Auto assign based on configured ordering Use specific ordering priority: |
| Options: | ✓ Enable this button for use on the device Enable Job Build mode by default Enable One-Touch scanning Enable Scan preview by default (only on supported devices) ✓ Require authentication ✓ Capture user password ✓ Always prompt user for password |
| | OK Cancel |

You can edit the default Name, Display Text, and Description for any button.

Note Do not change **Image** from the default value.

Note For buttons using **Require Authentication**, select **Capture user password** for the credential passthrough feature and **Always prompt user for password** for use with HPAC authentication.

- 2 Specify a location for the button. Select either of these options:
- Auto assign based on configured ordering The button is positioned based on a predefined order.
- Use specific ordering priority You can enter a value to indicate the button placement. Position I is in the upper left location and position 2 is in the upper right location, in a Z-order layout. The pattern is as follows:
 - | 2 3 4 5 6 etc.
- **3** Select addition options for the button:
 - Enable this button for use on the device Self-explanatory.
 - Enable job build This option enables the Scan More feature.

- Enable One-Touch scanning This allows the user to select a button with the documents already loaded in the Automatic Document Feeder for one-touch scanning. Typically, this is used with a Distribution that has all scan settings saved.
- Enable scan preview by default (only on supported devices) This allows the user to visually preview the documents being scanned from the device. This only applies to FutureSmart devices.
- Require authentication If you select this option, you can then indicate that the button should capture the user's password. Note that although the Routing Sheet feature typically does not require authentication, you can configure this requirement here.

Personal and Public Distributions

I If you are adding a **Personal Distributions** or **Public Distributions** button, click the **Options** tab.

| utton Properties 🗙 | | | | |
|---|--|--|--|--|
| General Options Job Properties Prompts Device Settings | | | | |
| ☑ Enable Public Distributions for the following user: | | | | |
| Email: administrator@VMELAD1.COM | | | | |
| Collection Name: Default Distributions | | | | |
| Distribution Listing: | | | | |
| Display multiple Distribution Collections as a single List Display multiple Distribution Collections grouped by Distribution Collection name | | | | |
| Display the following Distribution Collections | | | | |
| Name | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| OK Cancel | | | | |

2 Enter a **Public Email** address (if applicable) and set the **Enumeration Limit** for distributions (the maximum number of distributions allowable).

Scan to Distribution

I If you are adding a **Scan to Distribution** button, click the **Options** tab to route using an existing (already created) distribution.

2 Click Select and the Select Embedded Directive dialog appears.

| Ū, | Select Embe | dded Directive | | | | | × |
|----|---------------------|----------------|---------|-----------|------------|-----------|------------------|
| _ | Title | | | | | | |
| | Owner e-mail: | :] | | | | | |
| | Date created | | | /2012 🗾 | | | |
| | Date last use | d: 8/15/2012 🛓 | to 8/15 | /2012 🔺 | | | |
| | Expired | | - , | | | | |
| | Single use | | | | | | |
| | Public | | | | | | |
| | | | | | | | Find |
| | | | | | | | |
| | itle 🔺 🛛 (| Dwner | Created | Last Used | Single Use | Expires | Select |
| T | itle 🔺 🛛 (| Dwner | Created | Last Used | Single Use | Expires | Select Cancel |
| T | itle 🔺 🗍 (| Dwner | Created | Last Used | Single Use | Expires | |
| T | itle 🔺 🗍 (| Dwner | Created | Last Used | Single Use | Expires | Cancel |
| T | itle 🔺 🗍 (| Dwner | Created | Last Used | Single Use | Expires / | Cancel |
| | itle 🔺 🗍 (em(s) | Dwner | Created | Last Used | Single Use | Expires | Cancel |

- 3 Click the **Find** button to display all distributions.
- 4 Select a distribution and then click the **Select** button to choose the distribution that will be used when that button is selected from the device.

Fax

- I If you are adding a **Fax** button, click the **Options** tab to configure fax cover pages.
- 2 Select options to allow a cover page to be specified and include the cover page by default. In addition, you can indicate the information (subject, etc.) that will appear on the cover page.

| Button Properties 🛛 🗙 |
|---|
| Button Properties Image: Confirmations is a properties is a prompt is in the properties is a prompt is in the properties is a prompt is include Coverpage to be specified Image: Coverpage is a prompt is prompt is a prompt is a prompt is a prompt is a prompt is |
| Comment: |
| Recipient Name: Sender Name: |
| |
| |
| |
| |
| |
| |
| |
| OK Cancel |

- 3 Next, click the **Confirmations** tab to:
 - > Allow authenticated and non-authenticated users to select the button.
 - > Define the type of fax confirmations (select a field and click **Properties**).
 - Add recipients for confirmations (click the **Add** button).

Button Properties × General Options Confirmations Job Properties Prompts Device Settings Allow user to specify confirmations: Properties - Authenticated Users -- Email on Failure - Print on Failure -- Email and Print on Failure Remove --- None Unauthenticated Users Print on Failure **Confirmation Properties** X Name: Email on Failure Display Text: @labelEmailDelivery Recipients: %\\prOriginator% Properties Add... Remove OK Cancel

For example, you can edit the fields for the Originator for faxed faxes:

Routing Sheet, Scan to Destination, Scan to Distribution, Scan to Me, and Scan to My Files

I If you are adding a **Routing Sheet**, **Scan to Destination**, **Scan to Distribution**, **Scan to Me**, or **Scan to My Files** button, click the **Job Properties** tab.

| Job Property | Value | Properties |
|------------------------------|-------------------|------------|
| Originator OriginatorType | AccuRoute | Add |
| Destination RecipientType | routingsheet N | Remove |
| | | |
| | | |

You can add, remove, or change a property. This example shows the property of a **Destination**.

| | | Set Jol | b Property | i. | × |
|-----------|--------------|---------|------------|----|--------|
| Property: | Destination | | | | |
| Value: | routingsheet | | | | |
| | | | | OK | Cancel |

You can change an **Originator**, **Destination**, or **Recipient**. You also can add a **Transformation** (replacing a data value (a message property, recipient property, Embedded Directive property, or template variable) with another value).

Note that the Scan to Destination button allows for message routing based on routing rules.

The default setting is set to send to a destination of scantodestination, which can have an outbound rule associated with that destination to route to any location to which the AccuRoute server can route messages. You can edit this destination value. • You can also add Transformations here.

| ∃ Message pOriginator = HPCapture&Route | Properties |
|--|------------|
| prOriginatorType = 0 ⊡ Recipient | Add |
| prDestination = myfiles prRecipient Type = 0 Transformations | Remove |
| | |
| | |
| | |
| | |
| | |
| | |

Fax Release

If you are adding a **Fax Release** button, once you define its <u>General Properties</u>, you need to configure User Group access settings for those who will be using the **Fax Release** option. You also need to set up a Fax Release Calendar schedule, Routing information and/or other details for incoming faxes.

- I In the Server Administrator, go to **Configuration > Groups** node. Double-click the group of interest to open its **Group** properties.
- 2 Select Web in the Clients section. Check the Enable members of this group to use the following web view check box.

| Group | | × |
|--|--|------|
| General ⊂ Clients Access Image-In Connect Mobile Web | Web Image: Provide the state of the s | T |
| Web Features Custom Options Distribution Collections Document Stamps Fax Cover Pages Prompts Scan Settings Jobs Apply Properties Destinations Folders Printers | | |
| | OK Cancel | Help |

3 From the **Web View** drop-down menu, select the **Web View** for which you will enable Web Client Administration access. Click **OK**. 4 In the Server Administrator, go to **Configuration > Web Client Views** node. Double-click the Web Client View identified in the prior step to open the **Web Client View Properties**.

| t View Properties | | Folders | 2 |
|--|---|---------|------------|
| Inbox Outbox SentItems Approval ibutions MyRules SubscribedRules Mobile Reservations es Files erences inistration Routing Calendars Help Desk | 5 | | Properties |
| | | ОК | Cancel |

- 5 On the Folders tab, double-click Administration and select the Display this folder check box. Click OK and OK again.
- 6 Open the Web Client and select Administration > Calendars. Click New to create a new Fax Release Scheduling Calendar.

| New Fax Release S | Scheduling Calendar | Emai |
|-------------------|---------------------|-------------------------------------|
| ~~ (| | |
| 🗟 Messages | | |
| Distributions | Name: | production hours |
| | Monday - Friday: | Start Time 07:00 💌 End Time 17:00 🗸 |
| 🍯 My Files | 🗖 Saturday: | Start Time 00:00 💌 End Time 00:00 💌 |
| 🀱 Preferences | 🗖 Sunday: | Start Time 00:00 💌 End Time 00:00 💌 |
| dministration | | OK Cancel |
| 🖑 Help | | |

7 In the **Calendar**, define the time periods within which you want to allow authorized users to manually release faxes.Click **OK**.

| New Routing De | stination | |
|--|--|---|
| New Routing De « Messages Distributions Note: Preferences Administration Help | Fax number: Device Serial Number: Business Unit: Manual Hold all jobs Fax Release Calendar: production hours Afghanistan Standard Time Manual Override Pin Destination: O No Destination O Print on Device Printer: Regulated Printer? Regulated Printer? Print on specific Media Apply Document Stamp Route via RightFax C E-Mail | Regulated Destination ter v tination very Format DOC (OCR Text) vered Document Name |
| | | OK Cancel |

8 Also under Administration, select Routing and click New.

- 9 In **New Routing Destination**, enter the **Fax number** for which you want to set up receiving details.
- 10 On this screen you can
 - Associate a Device Serial Number or Business Unit.
 - Enable Manual Hold for all faxes from this number.
 - Enable Fax Release and assign a specific Calendar (such as the one created in step 7) to guide its use.
 - Assign a Manual Override Pin.
 - Assign a **Destination** for these faxes, with options such as a specific device, a regulated printer, or another destination, such as email or a Folder.
 - Identify whether the fax should be printed on a specific Media Size or have a Document Stamp applied.
 - Assign a **Delivery Format** and/or **Document Name** for all faxes from this number.
- II Click OK.

Job Queue

If you are adding a **Job Queue** button, once you define its <u>General Properties</u>, you need to enable the Destination Translation Table (DTT) in the Web Client for Administrative users of the **Job Queue** button. After that, you need to add a device of interest as a destination in the DTT.

To enable the DTT in the Web Client for Administrative users:

- I In the Server Administrator, go to Configuration > Web Client Views node. Double-click View.admin.xml to open Web Client View Properties.
- 2 In the Folders tab, select Administration > Routing and click the Properties button.
- 3 In Folder Properties, verify that Display this folder is selected.
- 4 Click **OK** and click **OK** again.
- 5 In the Server Administrator, go to **Configuration > Groups** node. Double-click the group of which the Administrative user is a member to open **Group Properties**.

Note If Administrator(s) do not already have a separate group, create one for them before proceeding.

- 6 Select Clients > Web and click the Properties button. Verify that Enable members of this group to use the following web view is selected.
- 7 Select View.admin.xml from the Web View drop-down menu.
- 8 Click OK.

To add a device as a destination in the DTT:

- I Log in to a Windows client system as an Administrative user (same as in Step 5 above) and open Internet Explorer.
- 2 In the address bar, enter the URL for the End User Interface. The default value for this is

http://<ServerName>/WebClient

- 3 In the End User Interface, select Administration on the left. The Routing screen is the default display. Click the New button.
- 4 Enter the following information on the **New Routing Destination** page:
 - a Fax Number: Enter the fully normalized fax number. For example: +10005551234
 - **b** Device Serial Number: Enter the serial number for the HP device.
 - c For the **Manual Hold** option, check the **Hold all jobs** option if all jobs to this device number are to be held indefinitely.
 - d If you selected the **Manual Hold** option, go to the **Manual Override Pin** text box and enter the PIN value to be used for enabling or disabling Manual Hold.
 - e Fax Release Calendar:
 - Check the Enabled option.
 - ▲ Select the **Calendar** from the drop-down menu.
 - ▲ Select the **Time Zone** from the drop-down menu.

- **Note** To be an option, the **Fax Release Calendar** must be created first. For more information about the **Administration** features of the Web Client, see the 'Configuring primary customized options on the Web Client Views Node' in the <u>AccuRoute Server Administrator Help</u>.
- f Destination: Choose Print on Device Printer, Route via RightFax, or the Email/UNC option:
 - For the Print on Device Printer option, provide the device IP Address or the UNC path to the device.

If using a Regulated Printer, select the **Regulated Destination** check box and enter the IP Address or the UNC path to the regulated printer.

You can select the **Print on specific Media** check box and identify from the drop-down menu the paper size on which incoming faxes will be printed.

You can also select the **Apply Document Stamp** check box and choose the stamp type of interest from the drop-down menu.

- For the Route via RightFax option, select AccuRoute FSP Connector for RightFax from the first drop-down menu and then select the server address of the RightFax Server from the second drop-down menu.
- For the Email/UNC option, select either E-mail or UNC and enter the email address or UNC path in the Destination text box.

You can define a specific document format from the **Delivery Format** drop-down menu.

You can also specify a document name in the **Delivered Document Name** text box.

5 5.Click OK.

Device Information

If you are adding a **Job Queue** button, once you define its <u>General Properties</u>, you need to enable the Destination Translation Table (DTT) in the End User Interface for Administrative users of the **Device Information** button. After that, you need to add a device of interest as a destination in the DTT.

To enable the DTT in the End User Interface for Administrative users:

- I In the Server Administrator, go to Configuration > Web Client Views node. Double-click View.admin.xml to open Web Client View Properties.
- 2 In the Folders tab, select Administration > Routing and click the Properties button.
- 3 In Folder Properties, verify that Display this folder is selected.
- 4 Click **OK** and click **OK** again.
- 5 In the Server Administrator, go to **Configuration > Groups** node. Double-click the group of which the Administrative user is a member to open **Group Properties**.

Note If Administrator(s) do not already have a separate group, create one for them before proceeding.

- 6 Select Clients > Web and click the Properties button. Verify that Enable members of this group to use the following web view is selected.
- 7 Select View.admin.xml from the Web View drop-down menu.
- 8 Click OK.

To add a device as a destination in the DTT:

- I Log in to a Windows client system as an Administrative user (same as in Step 5 above) and open Internet Explorer.
- 2 In the address bar, enter the URL for the End User Interface. The default value for this is

http://<ServerName>/WebClient

- 3 In the End User Interface, select Administration on the left. The Routing screen is the default display. Click the New button.
- 4 Enter the following information on the **New Routing Destination** page:
 - a Fax Number: Enter the fully normalized fax number. For example: +10005551234
 - **b Device Serial Number**: Enter the serial number for the HP device.
 - c For the **Manual Hold** option, check the **Hold all jobs** option if all jobs to this device number are to be held indefinitely.
 - d If you selected the **Manual Hold** option, go to the **Manual Override Pin** text box and enter the PIN value to be used for enabling or disabling Manual Hold.
 - e Fax Release Calendar:
 - Check the Enabled option.
 - ▲ Select the **Calendar** from the drop-down menu.
 - ▲ Select the **Time Zone** from the drop-down menu.

Note To be an option, the Fax Release Calendar must be created first.

For more information about the Administration features of the End User Interface, see the 'Customizing the AccuRoute End User Interface' section of the <u>AccuRoute Server Administrator Help</u>.

f Destination: Choose Print on Device Printer, Route via RightFax, or the Email/UNC option:

 For the Print on Device Printer option, provide the device IP Address or the UNC path to the device.

If using a Regulated Printer, select the **Regulated Destination** check box and enter the IP Address or the UNC path to the regulated printer.

You can select the **Print on specific Media** check box and identify from the drop-down menu the paper size on which incoming faxes will be printed.

You can also select the **Apply Document Stamp** check box and choose the stamp type of interest from the drop-down menu.

 For the Route via RightFax option, select AccuRoute FSP Connector for RightFax from the first drop-down menu and then select the server address of the RightFax Server from the second drop-down menu. ▲ For the **Email/UNC** option, select either **E-mail** or **UNC** and enter the email address or UNC path in the **Destination** text box.

You can define a specific document format from the **Delivery Format** drop-down menu.

You can also specify a document name in the **Delivered Document Name** text box.

5 Click OK.

Defining Prompts

6 Click the **Prompts** tab. Click **Add** to select a prompt configured on the AccuRoute server. The **Select Property Dictionary Field** is displayed.

| Button Properties |
|--|
| General Job Properties Prompts Device Settings |
| Add Remove |
| Select Property Dictionary Field |
| AppCode DEFICIENCYSTATUS DeficiencyComments DeficiencyDescription DeliveredDocumentName DeliveredFormat DocumentPassword DocumentStamp FolderID JobIDText LockUser Originator |
| OK Cancel |
| |
| OK Cancel |

Select a prompt and click **OK**.

Defining Device Settings

7 Click the **Device Setting** tab to configure native device scan settings. This is used for configuring a fleet of monochrome or color machines to use the same scanning settings. For example, the Fax button should only use Monochrome scan settings for better output quality.

| Button Properties | | × |
|---------------------------|--|------------|
| General Options J | lob Properties Prompts Device Settings | |
| | | 1 |
| Setting | Value | Properties |
| Resolution | 300 DPI | |
| Duplex | False | |
| Color Mode Compression | Monochrome Medium | |
| Orientation | Portrait | |
| Media Size | Letter | |
| inicala oizo | Editor | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | OK | Cancel |
| | | |

| Setting | Value | Properties |
|----------------------|----------------------|------------|
| Resolution | 300 DPI | |
| Duplex Color Mode | False Monochrome | |
| Compression | Monochrome Medium | |
| Drientation | Portrait | |
| Media Size | Letter | |
| | | |
| evice Setting | Properties | × |
| Resolution: | 300 DPI | • |
| (Cooldon) | 150 DPI | |

| | 300 DPI | |
| | 600 DPI | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Select a setting and click **Properties** to change the setting value. For example:

- **Note** The HP Officejet Pro 276dw does not support 600 x 600 scanning with the AccuRoute Embedded Device Client.
- 8 Click OK to return to the Device Group Properties.
 - **Note** All features/settings within each button can be configured after the button has been installed to a device and are updated instantaneously after selecting **OK**. Uninstallation and re-installation are required only if a button is added or removed, or if the button text is modified.

Defining Advanced Device Settings

9 Click the **Advanced** tab to modify settings that control the device's native settings for connectivity timeouts and job refresh settings.

Note Advanced features are for adding additional property metadata as part of a message to allow for advanced product capabilities. Please contact Customer Support for assistance with this feature.

Device Group Properties х General Settings Authentication Buttons Advanced Name Value ConfigurationRefreshInterval 1800 Add 100 DelayCount JobRefreshTimer 3. ConnectionTimeout 60 300 ResponseTimeout RetryInterval 60 **MaxConsecutiveRetries** 3 UllnactivityTimer 60 NOTE: These settings are advanced and changing them could cause the button to no longer work and should only be done when requested by Support. ΠK. Cancel

Take note of all defaults before changing any of these settings.

- 10 Click OK to complete the Device Group Properties.
- 11 Once a button configuration is complete, you can install devices using the configured Device Group settings, and the xml files can be exported for importing into AccuRoute's WebJet Admin server for button deployment.

Go to the **Devices** node and right-click on the group name. Then, select the **Export to Web Jet** Admin option. See <u>Installing AccuRoute Embedded Device Client buttons</u> (9-4).

Updating the Deviceloader.xml to support new devices

If you need to update the Deviceloader.xml to include new devices, refer to the <u>AccuRoute server</u> administrator on-line help.

Section 5: Installing Buttons on a New Device

Having created on the server one or more device groups and associated buttons, you can continue with the following steps:

Adding a new device and installing buttons (5-1)

Configuring device authentication (5-4)

Configuring the server (5-6)

See also <u>Section 10: Testing</u> (10-1) and the <u>AccuRoute server administrator on-line help</u> (for additional information including optional configurations, testing, and troubleshooting).

Adding a new device and installing buttons

- I In the console tree, expand the AccuRoute server and go to the **Devices** node.
- 2 Select the group to which you want to add a device. Then, right-click and select the New > Device. The Properties for device page opens.

| Properties for device | х |
|--------------------------------------|---|
| General Device Configuration Journal | |
| (Device Details Not Known) | |
| Name: | |
| Description: | |
| Network Address: | |
| Group: 2nd floor HP | |
| | |
| | |
| | |
| | |
| | |
| | |
| OK Cancel <u>H</u> elp | |

- 3 In the **Name** text box, enter a name for the device.
- 4 Optionally, in the **Description** text box, enter a device description.
- 5 In the **Network Address** text box, enter the device IP address.
- 6 Click the **Connection** tab. The following example is for HP OXPd v1.6 or OXPd 1.7 devices:

| Propertie | s for I | HP OXPd de | vice | | | | X |
|-----------|------------|----------------|------|----|--------|------|---|
| General | Conr | nection Jou | imal | | | | |
| Device / | Authen | tication | | | | | - |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | ОК | Cancel | Help |

- 7 In the **Username** text box, enter the device Administrator name.
- 8 In the **Password** text box, enter the Administrator password.
- **9** If you are using the AccuRoute Embedded Device Client, configure the **SNMP Community Strings** section (this section will not appear for HP OXPd v1.4).
 - ▶ In the **Public** text box, enter the v1.6 device public community string.
 - In the Private text box, enter the v1.6 device private community string.

The default value is public in both the **Public** and **Private** fields.

- 10 Click **OK** to add the device.
- **II** Test by selecting the newly added device. Right-click on the device name and select **Query** from the drop-down options. Verify that the device is successfully queried from the server.
- 12 After a successful query, right-click and select **Install** to install buttons on your device.
- **13** Verify that the buttons appear on the device.

Section 5: Installing Buttons on a New Device

Configuring device authentication

When you select Device Authentication from the Device Group properties, you need to complete the following configuration at the device in order to properly identify the logged-in user (for button options such as **Personal Distributions** or **Scan to My Files**).

Configuration options include:

- Configuring LDAP authentication (5-4)
- <u>Configuring AccuRoute device authentication</u> (5-5)

Note HP Pro devices do not support LDAP authentication.

Configuring LDAP authentication

When you choose LDAP Authentication, the user is prompted to enter an email username and password. The Authentication Manager uses the login credentials to initiate a lookup. The lookup validates the user and returns the user's email address. Then the AccuRoute Embedded Device Client uses the email address to request information from the AccuRoute server, such as a list of the user's Personal Distributions. When the scan is submitted to the AccuRoute server as a message, the email address is used to set the property proriginator.

Both the email username and password are required to identify the device user, and the credentials are validated via LDAP authentication. This method provides increased security.

Note With LDAP Authentication configured for the device group on the Administrator, the LDAP lookup only appears on the device once **Require Authentication** is enabled for the relevant device button. See step 6 in <u>Defining Password Properties</u> (4-9) for details.

The following figure is an example of an LDAP Authentication configuration for Active Directory. (For information on configuring LDAP Authentication, consult <u>AccuRoute v6.1 Documentation</u>.)

Figure 5-1: Example of an LDAP authentication configuration for Active Directory (2 screens)

LDAP Authentication binds to the LDAP server with the device user's common name (CN). The search is conducted within the root ou=engineering,cn=users,dc=hp,dc=com using the device user's common name (CN). The return value is the user's email address (mail) and name (displayName)

Configuring AccuRoute device authentication

- I Open a Web browser and enter the device IP address.
- 2 Log in to the Embedded Web Server. All options become available.

- 3 Go the Settings tab and click Authentication Manager.
- 4 Locate the following AccuRoute functions:
 - Scan to My Files
 - Personal Distributions
 - Scan to Me

The list shows the options that are installed with the AccuRoute Embedded Device Client, so it can contain all, some, or none of these functions.

- 5 For each of the features listed above, click the drop-down menu.
- 6 Select LDAP as the authentication method for each scanning feature that requires user login.

| Configure Device | Authentication Manager | |

7 Click Apply.

Configuring the server

When a message arrives on the AccuRoute server, the Dispatch component applies rules to the message. The rules determine how the server processes the message. Every message on the server must match a rule associated with an action in order to be processed and distributed to its final destination. The additional configuration in this section ensures that rules exist for AccuRoute scanning features.

Several AccuRoute scanning features require special rules on the AccuRoute server. Most of these rules are created by default when you install AccuRoute. You can, if needed, create rules based on the AccuRoute scanning features available on devices in your environment. For more information on rules and how to create them, refer to the <u>AccuRoute server administrator on-line help</u>.

When rules have been created for all AccuRoute scanning features available on devices in your environment, the AccuRoute server is fully configured for the AccuRoute Embedded Device Client. Now you are ready to test the AccuRoute scanning features. Continue with the information in <u>Section 10: Testing</u> (10-1).

Section 6: Configuring HP MFP Devices

This section describes the configuration steps for several types of HP MFP devices, including the HP S900, HP Pro, FutureSmart, and OZ devices. The configurations vary in types of certificates and how to set up HTTPS for SSL.

Select from the following sections as appropriate to your system environment:

- Supported HP devices
- <u>Configuring HP S900 Series MFP Devices</u>
- <u>Configuring FutureSmart and OZ devices</u>
- <u>Configuring HP Pro Devices (only)</u>
- <u>Configuring HP Pro Devices on a remote OPS Server with HTTPS support</u>
- <u>Configuring HP FutureSmart, OZ, and PRO devices to use the OPS Server Certificate for HTTPS</u>
 <u>environments</u>

Supported HP devices

Upland AccuRoute supports the AccuRoute Embedded Device Client on all the devices listed in this section...

| Device | Group | Supported firmware | OXPd Version |
|----------------------------|-------|--------------------|--------------|
| LaserJet M3035 MFP | 20 | 48.301.7 | 1.6.3.2 |

Table 6-1: List of devices supported with the AccuRoute Embedded Device Client

- **Note** All LaserJet models listed here are part of the *MFP* series. Other LaserJet models that are part of the *printer* series do not have the scanning capabilities required to support the AccuRoute Embedded Device Client.
- Note OXPd:SolutionInstaller only supports network-enabled device models. OXPd:SolutionInstaller also requires that the device on which it is running has a writable, non-volatile mass storage partition.

Configuring HP S900 Series MFP Devices

The HP S900 Series devices support all of the features in the Device Client, with some modifications to the standard process. See the sections below for the modified configuration settings.

This appendix describes the processes for

- Enabling HTTPS for SSL on HP S900 Series devices (6-4)
- Adding buttons to HP S900 Series MFP devices (6-4)
- Device authentication (6-5)

Note Verify that Section 3: Installation has been completed and that the Device Client is installed.

Enabling HTTPS for SSL on HP S900 Series devices

Apply the following steps to the HP S900 Series device after completing the HTTPS configuration outlined in <u>Section</u> <u>3: Setting up a CA Certificate and SSL</u>.

- I In a browser, open the **Embedded Web Server** for the HP S900 Series device by entering the **IP** address of the device, and log in.
- 2 Select Security Settings > SSL settings.
- 3 In the Setting of SSL section, select Enable for Client Port: HTTPS.
- **4** Save the configuration.

Adding buttons to HP S900 Series MFP devices

Note It is recommended that you install the buttons as Nested buttons. For more information, see <u>Using Nested</u> <u>buttons</u> (6-5).

I In the AccuRoute Administrator, acquire an XML Group Dump from the Device Group. Highlight the Devices node, right-click on it while holding the CTRL key and select Dump XML. By default, this .xml opens in Internet Explorer.

| Dump XML | |
|----------------------|---|
| New | ٠ |
| New Window from Here | |
| Help | |

- 2 In a browser, open the **Embedded Web Server** for the HP S900 Series device by entering the IP address of the device, and log in.
- 3 From the left menu, select Application Settings/External Application Settings.
- 4 Select Add(Y).
- 5 In the **Standard Application Registration** page, add an **Application Name** for the feature button.
- 6 In Address for Application UI, use the following generic URL string:

http://DeviceClientServerIP/Device Client/ device.aspx?Group=<GroupName>&FeatureID=<FeatureID>&ClearHistory=1

- 7 Replace the following fields with the appropriate values:
 - Device Client Server IP
 - Group name
 - Feature ID

You can find the Group name under Devices in the Server Administrator.

Copy the **Feature ID** value from the **Dump XML** <Feature id= >.This corresponds with the Feature Button created in the AccuRoute Administrator.

Note If there are multiple Device Groups, verify the Group Node before searching for the feature button.

8 The following XML Group dump example shows a Nested button feature id within the HP S900 Series Device Group:

```
</UI>
                         <Additional/>
  </Confirmation>
</DeliveryConfirmations:
<Uescription>scan to HP Capture and Koute</Uescription>
<AllowboBuild>false</AllowboBuild>
<EnablePreview>false</EnablePreview>
<AllowUseByNonAuthenticatedUsers>true</AllowUseByNonAuthenticatedUsers>
<CaptureAuthenticatedPassword>alse</CaptureAuthenticatedPassword>
<CaptureAuthenticatedPasswordAlwaysPrompt>false</CaptureAuthenticatedPasswordAlwaysPrompt>
                                       <FeatureSpecific>
                                                      <GUID>c9e9e27e-8d07-47c0-8de3-4ddacac029cc</GUID>
                                                      <priority>1</priority>
<help>@helpfeatures</help>
                                                     <ImageNormal>nested</ImageNormal>
                                                    <PersonalED1/>
<RoutingSheet2/>
<GroupED3/>
<MyAccuRoute4/>
                                                     <ScanToDataProvider5/>
                                       <Fax6/>
</FeatureSpecific>

</reatures</p>

Features

Image: the second secon
                                         <Image/
                                       <Text>@buttonpersonalText</Text>
<Description>@buttonpersonalDesc</Description>
<AllowJobBuild>false</AllowJobBuild>
<EnablePreview>false</EnablePreview>
                                        <AllowUseBvNonAuthenticatedUsers>false</AllowUseBvNonAuthenticatedUsers>
                                        CaptureAuthenticatedPassword> false
```

In this example, the specific string created is

http://10.0.0.1/DeviceClient/
device.aspx?Group=hp&FeatureID=Button0&ClearHistory=1

Using Nested buttons

It is recommended that you use Nested buttons, because:

- The HP S900 Series MFP devices have a display limit of 8 buttons in the main window.
- Nested buttons need only be registered once, as opposed to the individual registrations required if they were not nested.

For more information about Nested buttons, see <u>AccuRoute scanning features in AccuRoute Embedded Device</u> <u>Client</u> (1-2).

Device authentication

- I In a browser, open the **Embedded Web Server** for the device and log in.
- 2 Select Network Settings > LDAP settings.
- 3 Enter the Name, Search root, and LDAP server IP information.
- 4 Set Server Type to Custom (the Search attribute has a default value of CN.)

- 5 Optionally, you can set other **Custom Attributes**, which allow for additional return results.
- 6 Enter the Domain\Username and Password for LDAP queries.
- 7 Change the **Bind Prefix** to CN. This will search based on the user's Common name and can be changed to any Active Directory Attribute.

Note Other login options are available based on Email address or User number.

- 8 Select **Execute** to verify LDAP search permissions and then select **Submit**.
- 9 From the left menu, select User Control > Default Settings.
- 10 Select User Authentication > Enable.
- II Select Authentication Method Setting > Authenticate a User by Login name and Password.
- 12 Select Submit and then Update.

Configuring FutureSmart and OZ devices

This section describes the configuration process for FutureSmart and OZ devices only. The configuration involves setting up a CA certificate using Microsoft Certificate Services, and enabling SSL.

Note If you are using HTTP, skip this section and go to <u>Section 4: Creating Device Groups on the AccuRoute</u> <u>Server Administrator</u> (4-1).

If you require HTTPS support, you can follow the instructions in this section to set up a CA certificate with the Microsoft Certificate Services and enable SSL.

Otherwise, use a certificate from a trusted certificate authority. The certificate must be installed on the IIS system.

Note The CA Certificate steps in this section are not supported for HP Pro devices.

Requirements for setting up a CA certificate

You must meet the following requirements when setting up a CA certificate:

- Web server that meets the requirements for AccuRoute Intelligent Device Client.
- Windows user account that belongs to the Administrators group.

The remainder of this section provides procedures for:

Downloading the MakeCert executable (6-7)

Creating the certificate (6-7)

Installing the certificate to Internet Information Services (IIS) (6-7)

Adding the certificate to the Client certificate directory (6-8)

Creating an SSL binding (6-8) Requiring SSL for the virtual web sites (6-18) Verifying the SSL binding (6-18) Enabling directory browsing in IIS (6-18) Verifying HTTPS browsing (6-19) Editing the OmISAPIU.xml file (6-19) Editing the Bootstrap.xml file (6-10)

You should complete each procedure in the order in which they are presented.

Downloading the MakeCert executable

Copy makecert.exe to your local computer. The MakeCert executable is available as part of the Windows SDK. For instructions on how to download the Windows SDK and the MakeCert executable, see the <u>Microsoft</u> <u>documentation</u>.

When the download is complete, copy the executable to a shared network folder from which you can access it.

Creating the certificate

- I Open a command prompt and navigate to the directory where you saved the MakeCert executable (makecert.exe) on your local computer (typically on the C drive).
- 2 Run the following command (as Administrator):

```
makecert.exe -r -pe -n "CN=fully_qualified_domain_name_of_iis_server" -b
01/01/2006 -e 01/01/2013 -ss my -sr localMachine -sky exchange -sp
"Microsoft RSA SChannel Cryptographic Provider" -sy 12
"fully_qualified_domain_name_of_iis_server.cer"
```

```
fully_qualified_domain_name_of_iis_server should be in this format:
servername.domain.com
```

Note You cannot copy and paste the command text above due to formatting issues. This text is available to copy in the AccuRoute Embedded Device Client section of the <u>On-line help for the administrator</u>. If you key in the command text, note that there is a space at the end of the first three lines shown above.

When the command is run properly, the system will display a message indicating that it succeeded.

Installing the certificate to Internet Information Services (IIS)

You must now install the certificate from the root of C.

- I Select and right-click the certificate.
- 2 Select Install Certificate. The Certificate Import wizard appears.

Note In Windows 2012 environments, the Certificate Import Wizard prompts you to select either Current User or Local Machine. Select Local Machine.

3 Select NEXT.

© 2018 by Omtool, Ltd. (Upland AccuRoute) All rights reserved. Omtool, AccuRoute and the Company logo are trademarks of the Company. Trade names and trademarks of other companies appearing in this document are the property of their respective owners.

- 4 Select Place all certificates in the following store and select BROWSE.
- 5 Select Trusted Root Certification Authorities and select OK.
- 6 You will be prompted with this security warning:

You are about to install a certificate from a certification authority (CA) claiming to represent... Do you want to install this certificate?

Select **YES**. A message indicating the import was successful should appear.

Adding the certificate to the Client certificate directory

You will need to export the certificate from the Web server as a file named WebServer.cer and copy it to the Certificate folder created during the AccuRoute Embedded Device Client installation.

- I Navigate to the IIS\LOCAL MACHINE directory and locate Server Certificates.
- 2 Locate the newly created certificate. Double-click to open the certificate **Properties** page.
- 3 Click on the **Details** tab.
- 4 Choose the Copy to File option. The Certificate Export wizard opens.
- 5 Click Next.
- 6 In the Export Private Key dialog, select No, do not export the private key.
- 7 Click Next.
- 8 In the Export File Format dialog, select DER encoded binary X.509 (.CER).
- 9 Click Next.
- 10 In the File to Export dialog, select Browse. The Save As dialog opens.
- **II** Browse to the directory:

[DeviceClientInstallFolder]\Certificate

- 12 In the File Name field, enter WebServer.cer with DER Encoded Binary X.509 (*.cer) as the Save Type.
- 13 Click Save and then Next. The Completing the Certificate Export wizard opens.
- 14 Click Finish.
- 15 When a message appears stating that the export was successful, click OK.

Creating an SSL binding

- I Open the IIS Manager.
- 2 Click on the **Default Web Site** and locate **Bindings** under **Edit Site** (top right corner of the window).
- 3 Click Bindings. The Site Bindings dialog opens.
- 4 Click on HTTPS type and select Edit. The Edit Site Bindings dialog opens.
- 5 In the SSL certificate drop-down, choose the certificate that was created earlier and click OK.
- 6 Click **Close** to close the dialog.

Requiring SSL for the virtual web sites

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select Device Client.
- 3 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.
- 4 Expand Local machine > Default Web Site and select WebAPI.
- 5 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.

Verifying the SSL binding

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select WebAPI.
- 3 Click on Browse *:443 (HTTPS) under Manage Application/Browse Application (located at the top right corner of the IIS dialog).

You will see this message: There is a problem with this web site's security certificate.

Note This message is expected and safe to ignore.

- 4 Click the **Continue to this website (not recommended)** option.
- 5 Verify that the **IIS 7** dialog opens.

Enabling directory browsing in IIS

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select DeviceClient.
- 3 Double-click on Directory browsing.
- 4 In the right Actions field, select ENABLE.
- 5 Expand Local Machine > Default Web Site and select WebAPI.
- 6 Double-click on **Directory browsing**.
- 7 In the right Actions field, select ENABLE.

Verifying HTTPS browsing

- I Open the IIS Manager.
- 2 Expand the **Default Web Site**.
- 3 Expand OXP.
- 4 Select the **Configuration** folder.
- 5 In the actions pane, select **Browse*:443(https)**.
- 6 Select Continue to this website (not recommended).
- 7 Verify that the local page is displayed: .../DeviceClient/Configuration/

- 8 In the IIS Manager with **Default Web Site** expanded, expand **WebAPI**.
- 9 In the actions pane, select Browse*:443(https).
- 10 Select Continue to this website (not recommended).
- **II** Verify that the localhost page is displayed:

.../WebAPI/

12 Select Continue to this website (not recommended).

Editing the OmISAPIU.xml file

I Navigate to the following path:

[ServerInstallFolder]\WebAPI\WebAPI\Scripts

2 In OmISAPIU.xml, find the FileTransfer node. Replace the IP address with the fully qualified domain name. Also, change http to https.

```
<FileTransfer>https://fully_qualified_domain_name/WebAPI/FileTransfer/</FileTransfer>
```

Note XML files can be edited using Microsoft Notepad.

3 Save the file.

Editing the Bootstrap.xml file

- I Navigate to the following path. [DeviceClientInstallFolder]\Configuration
- 2 In bootstrap.xml, change http to https.

<Server>https://fully_qualified_domain_name/webapi/scripts/omisapiu.dll </Server>

- 3 Save the file.
- 4 Reset IIS.

Configuring HP Pro Devices (only)

This section describes the installation and configuration process for local HP Pro devices only.

HP Pro devices require an OPS server for registration prior to installing feature buttons on the devices. The OPS server creates a certificate used for a secure registration of each Pro device. You can also use this certificate in your IIS server for HTTPS support.

Note The CA Certificate steps, described in <u>Section 3: Setting up a CA Certificate and SSL</u> (3-1), are not supported for HP Pro devices.

The OPS Server installation process includes the following steps:

Installing the AccuRoute Embedded Device Client on the server (6-11)

Installing the OPS kit on the server (6-11)

Adding the OPS server certificate to the Client certificate directory (6-16)

Importing the OPS certificate into the device EWS (6-17)

OPS registration (6-17)

HTTPS support using the OPS-created certificate (6-18)

Note Scanning in landscape orientation is currently unavailable for HP Pro devices.

Installing the AccuRoute Embedded Device Client on the server

On the system running the AccuRoute server, install the AccuRoute Embedded Device Client. See <u>Installing the</u> <u>AccuRoute Embedded Device Client</u> (3-1) for more information.

Installing the OPS kit on the server

- I On the server, navigate to [ServerInstallFolder]\Tools.
- 2 Right-click and select Run as Administrator.
- 3 Run setup.exe for OPS.
- 4 The OPS InstallShield wizard appears and requests that you install the following two items:
 - ▶ GnuWin32 OpenSSL-0.9.8h-1
 - setup-couchdb-1.2.0 otp R15B

| Status | Requirement | |
|---------|--------------------------------|--|
| | g GnuWin32_OpenSSL-0.9.8h-1 | |
| Pending | g setup-couchdb-1.2.0_otp_R15B | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

- 5 Click Install.
- 6 After installing the items in Step 3, the following message may appear:

To complete the installation of Apache CouchDB, setup must restart your computer. Would you like to restart now?

| OP: | Shield Wizan requires the f alling these red | following items to be installed on | your computer. Click Instal | l to begin |
|-----------------------------------|--|--|------------------------------------|------------|
| Status Succeeded Installing | (?) T | Fo complete the installation of Apa estart your computer. Would you like to restart now? | ache CouchDB, Setup must Yes No | |
| | - | | Instali | Cancel |

If this message appears, click **Yes** to restart. The OPS InstallShield wizard reappears upon restarting the system.

ConstallShield Wizard
Welcome to the InstallShield Wizard for OPS
The InstallShield(R) Wizard will install OPSv0.4.7 on your
computer. To continue, click Next.
WARNING: This program is protected by copyright law and
international treaties.

Otherwise, the OPS InstallShield wizard **Welcome** screen immediately appears.

7 Click **Next**. The **License Agreement** screen appears.

Adding the OPS server certificate to the Client certificate directory

- I Open a Windows console and select File > Add /Remove snap in...
- 2 Select Certificates and click the Add button. The Certificates snap-in wizard appears.
- 3 Select the **Computer account** radio button and click **Next**, **Finish** and **OK**.

The console loads with the new Certificate snap-in.

- 4 Expand Certificates (Local Computer) > Trusted Root Certification Authorities > Certificates.
- 5 Right-click the OPS certificate and select All tasks > Export.
- 6 The Certificate Export wizard appears. Select Next.

6-17

- 7 Choose Base-64 encoded x.509(.CER) and select Next.
- 8 Name the file and select **Browse**.
- 9 Place the certificate in C:\Program Files (x86)\Hewlett-Packard\OPS.
- 10 Select Next and then click Finish.

Importing the OPS certificate into the device EWS

- I Open and log into the EWS of the Pro Device.
- 2 On the **Network** tab select **Advanced settings > Certificates**.
- 3 Select Import > Choose File.
- 4 Browse to the location where the OPS certificate was saved and select **Open** and then **Finish**.

OPS registration

I At a command prompt enter

C:\Program Files (x86)\Hewlett-Packard\OPS\bin>OPSSetup

2 You will be prompted to choose from a selection of options.

Select Option 3: Register a device to the OPS server.

- **3** Enter the IP address for the device. For example, 123.456.78.9.
- 4 Enter the device **username** and **password** you want to use, noted from <u>Installing the OPS kit on the</u> <u>server</u> (6-11).
- 5 Enter the OPS server URL you want to register. For example, https://<hostname or IP>:port.
- 6 Enter the **username** and **password** for the OPS server.

Note The OPS server URL and username can be obtained from Steps 8 and 9 above in <u>Installing the OPS kit on</u> the server (6-11).

7 The following message appears:

OPS Registered successfully

Your local OPS server is now installed. See <u>Creating a group of devices</u> (4-1) for more information on creating device groups.

HTTPS support using the OPS-created certificate

Creating an SSL binding

- I Open the IIS Manager.
- 2 Click on the **Default Web Site** and locate **Bindings** under **Edit Site** (top right corner of the window).
- 3 Click on Bindings. The Site Bindings dialog opens.
- 4 Click on HTTPS type and select Edit. The Edit Site Bindings dialog opens.
- 5 In the SSL certificate drop-down, choose the certificate that was created earlier and click OK.
- 6 Click Close to close the dialog.

Requiring SSL for the virtual web sites

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select Device Client.
- 3 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.
- 4 Expand Local machine > Default Web Site and select WebAPI.
- 5 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.

Verifying the SSL binding

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select WebAPI.
- 3 Click on Browse *:443 (HTTPS) under Manage Application/Browse Application (located at the top right corner of the IIS dialog).

You will see this message: There is a problem with this web site's security certificate.

Note This message is expected and safe to ignore.

- 4 Click the **Continue to this website (not recommended)** option.
- 5 Verify that the **IIS 7** dialog opens.

Enabling directory browsing in IIS

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select DeviceClient.
- 3 Double-click on **Directory browsing**.
- 4 In the right Actions field, select ENABLE.
- 5 Expand Local Machine > Default Web Site and select WebAPI.

- 6 Double-click on **Directory browsing**.
- 7 In the right Actions field, select ENABLE.

Verifying HTTPS browsing

- I Open the IIS Manager.
- 2 Expand the **Default Web Site**.
- 3 Expand OXP.
- 4 Select the **Configuration** folder.
- 5 In the actions pane, select Browse*:443(https).
- 6 Select Continue to this website (not recommended).
- 7 Verify that the local page is displayed: .../DeviceClient/Configuration/
- 8 In the IIS Manager with **Default Web Site** expanded, expand **WebAPI**.
- 9 In the actions pane, select **Browse*:443(https)**.
- 10 Select Continue to this website (not recommended).
- **II** Verify that the localhost page is displayed:

.../WebAPI/

12 Select Continue to this website (not recommended).

Editing the OmISAPIU.xml file

I Navigate to the following path.

[ServerInstallFolder]\WebAPI\WebAPI\Scripts

2 In OmISAPIU.xml, find the FileTransfer node. Replace the IP address with the OPS Servername or IP. Also, change http to https.

<FileTransfer>https://OPS Servername or IP/WebAPI/FileTransfer/ </FileTransfer>

This OPS Servername is based on the value from Step 10 of Installing the OPS kit on the server.

Note XML files can be edited using Microsoft Notepad.

3 Save the file.

Editing the Bootstrap.xml file

- I Navigate to the following path: [DeviceClientInstallFolder]\Configuration
- 2 In bootstrap.xml, change http to https.

```
<Server>https://OPS Servername or IP/webapi/scripts/omisapiu.dll </
Server>
```

This OPS Servername is based on the value from Step 10 of Installing the OPS kit on the server.

3 Save the file and reset IIS.

Configuring HP Pro Devices on a remote OPS Server with HTTPS support

This section describes the installation and configuration process for HP Pro devices on a remote OPS Server with HTTPS support, which is installed on a system remote from the AccuRoute server. This includes HTTPS support on a remote IIS server.

HP Pro devices require an OPS server for registration prior to installing feature buttons on the devices. The OPS server creates a certificate used for a secure registration of each Pro device. You can also use this certificate in your IIS server for HTTPS support.

This process includes the following steps:

Installing the AccuRoute Embedded Device Client on the local server (6-20) Installing the OPS kit on the remote server (6-20) Exporting the OPS server certificate (6-25) Importing the OPS certificate into the device EVVS (6-26) OPS registration (6-26) HTTPS support using the OPS-created certificate (6-27) Note In these steps, System A represents the local system. System B represents the remote system.

Installing the AccuRoute Embedded Device Client on the local server

On the local system (System A) running the AccuRoute server, install the AccuRoute Embedded Device Client. See Installation (3-1) for more information.

Note If you want HTTPS support with your remote OPS server installation, the OPS server must be installed on the system where the IIS server is installed. To use the HTTPS certificate, the OPS server must be installed on the IIS server.

Installing the OPS kit on the remote server

- I From the local server (System A), navigate to the \Tools folder on the remote server (System B).
- 2 Right-click and select Run as Administrator.
- 3 Run setup.exe for OPS on System B.
- 4 The OPS InstallShield wizard appears and requests that you install the following two items:

6-21

- GnuWin32_OpenSSL-0.9.8h-1
- setup-couchdb-1.2.0 otp R15B

| | tallShield Wizard OPS requires the following items installing these requirements. | to be installed (| on your computer. Click | Install to begin |
|---------|---|-------------------|-------------------------|------------------|
| Status | Requirement | | | |
| Pending | GnuWin32_OpenSSL-0.9.8h-1 | | | |
| Pending | g_setup-couchdb-1.2.0_otp_R1 | 5B | | |
| | | | | |
| | | | Install | Cancel |

- 5 Click Install.
- 6 After installing the items in Step 3, the following message may appear:

To complete the installation of Apache CouchDB, setup must restart your computer. Would you like to restart now?

| installir | quires the following items to be installed on your computer. Click Install to begin ig these requirements. |
|------------|---|
| Installing | To complete the installation of Apache CouchDB, Setup must restart your computer. Would you like to restart now? |
| | Yes No |

If this message appears, click **Yes** to restart. The OPS InstallShield wizard reappears upon restarting the system.

Otherwise, the OPS InstallShield wizard **Welcome** screen immediately appears.

7 Click **Next**. The **License Agreement** screen appears.

| 😸 OPS - InstallShield Wizard | | | X |
|---|---|---|---|

| DB Details: | oxpdleops | Usernan | e admin |
| | | | |
| Port | 5984 | Passwor | d |
| Port | 5984 | | d Debug Log |

- 10 In the **Hostname** field enter either the IP or FQDN of the server on which OPS is installed. This value is the OPS server name. Make note of this value, as you will need to reference it later during device registration and HTTPS configuration.
- II Enter the **Passwords** in both the **OPS Details** and **DB Details** sections. Also make note of these for later use.

PPS - InstallShield Wizard

 Ready to Install the Program

 The wizard is ready to begin installation.

 Click Install to begin the installation.

 If you want to review or change any of your installation settings, click Back. Click Cancel to
 exit the wizard.

InstallShield

 ABack
Install
Cancel

12 Click Next. The Ready to Install the Program screen appears.

- 13 Click Install.
- 14 The OPS InstallShield Wizard Completed screen appears.

| B OPS - InstallShield Wizard | |
|------------------------------|--|
| | InstallShield Wizard Completed |
| 0 | The InstallShield Wizard has successfully installed OPS. Click Finish to exit the wizard. |
| 44.0 | I Launch OPS |
| | Show the readme file |
| | |
| | |
| | < Back Finish Cancel |

Select both the Launch OPS and Show the readme file check boxes (Show the readme file is optional) and then click Finish.

15 A pop-up message appears to inform you that the OPS server is listening at the IP address and port listed in step 9.

Click OK. OPS now appears as a Windows service.

Exporting the OPS server certificate

- I Open a Windows console and select File > Add /Remove snap in...
- 2 Select **Certificates** and click the **Add** button. The **Certificates** snap-in wizard appears.
- 3 Select the **Computer account** radio button and click **Next**, **Finish** and **OK**.

The console loads with the new **Certificate** snap-in.

- 4 Expand Certificates (Local Computer) > Trusted Root Certification Authorities > Certificates.
- 5 Right-click the OPS certificate and select All tasks > Export.
- 6 The Certificate Export wizard appears. Select Next.

6-26

- 7 Choose Base-64 encoded x.509(.CER) and select Next.
- 8 Name the file and select **Browse**.
- 9 Place the certificate in [DeviceClientInstallFolder]\OPS.

10 Select Next and then click Finish.

Importing the OPS certificate into the device EWS

- I Open and log into the EWS of the Pro Device.
- 2 On the **Network** tab select **Advanced settings > Certificates**.
- 3 Select Import > Choose File.
- 4 Browse to the location where the OPS certificate was saved and select **Open** and then **Finish**.

OPS registration

I At a command prompt enter

[DeviceClientInstallFolder] \OPS\bin>OPSSetup

2 You will be prompted to choose from a selection of options.

Select Option 3: Register a device to the OPS server.

- **3** Enter the IP address for the device. For example, 123.456.78.9.
- 4 Enter the device **username** and **password** you want to use, noted from Step 10 of <u>Installing the OPS</u> <u>kit on the remote server</u> (6-20).
- 5 Enter the **OPS server URL** you want to register. For example, 123.456.78.9:8765.
- 6 Enter the username and password for the OPS server.

Note The OPS server URL and username can be obtained above from Steps 8 and 9 in <u>Installing the OPS kit on</u> the remote server (6-20). All devices will be using this Certificate for HTTPS communication.

7 The following message appears:

OPS Registered successfully

Your remote OPS server is now installed. See <u>Creating a group of devices</u> (4-1) for more information on creating device groups.

Note When using the OPS-created certificate as the certificate in an HTTPS environment for HP Pro, Futuresmart and Oz devices, you must browse to place the certificate in [DeviceClientInstallFolder]\OPS.

HTTPS support using the OPS-created certificate

Creating an SSL binding

- I Open the IIS Manager.
- 2 Click on the **Default Web Site** and locate **Bindings** under **Edit Site** (top right corner of the window).
- 3 Click on Bindings. The Site Bindings dialog opens.
- 4 Click on HTTPS type and select Edit. The Edit Site Bindings dialog opens.
- 5 In the SSL certificate drop-down, choose the certificate that was created earlier and click OK.
- 6 Click Close to close the dialog.

Requiring SSL for the virtual web sites

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select Device Client.
- 3 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.
- 4 Expand Local machine > Default Web Site and select WebAPI.
- 5 Open SSL Settings and check Require SLL. Under client certificates, select Ignore.

Verifying the SSL binding

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select WebAPI.
- 3 Click on Browse *:443 (HTTPS) under Manage Application/Browse Application (located at the top right corner of the IIS dialog). You will see this message:

There is a problem with this web site's security certificate.

Note This message is expected and safe to ignore.

- 4 Click the **Continue to this website (not recommended)** option.
- 5 Verify that the **IIS 7** dialog opens.

Enabling directory browsing in IIS

- I Open the IIS Manager.
- 2 Expand Local Machine > Default Web Site and select DeviceClient.
- 3 Double-click on Directory browsing.
- 4 In the right Actions field, select ENABLE.
- 5 Expand Local Machine > Default Web Site and select WebAPI.

6-28

- 6 Double-click on Directory browsing.
- 7 In the right Actions field, select ENABLE.

Verifying HTTPS browsing

- I Open the IIS Manager.
- 2 Expand the **Default Web Site**.
- 3 Expand OXP.
- 4 Select the **Configuration** folder.
- 5 In the actions pane, select Browse*:443(https).
- 6 Select Continue to this website (not recommended).
- 7 Verify that the local page is displayed:
 - .../DeviceClient/Configuration/
- 8 In the IIS Manager with **Default Web Site** expanded, expand **WebAPI**.
- 9 In the actions pane, select **Browse*:443(https)**.
- 10 Select Continue to this website (not recommended).
- **II** Verify that the localhost page is displayed:

.../WebAPI/

12 Select Continue to this website (not recommended).

Editing the OmISAPIU.xml file

I Navigate to the following path.

[ServerInstallFolder]\WebAPI\WebAPI\Scripts

2 In OmISAPIU.xml, find the FileTransfer node. Replace the IP address with the OPS Servername or IP. Also, change http to https.

<FileTransfer>https://OPS Servername or IP/WebAPI/FileTransfer/ </FileTransfer>

3 This OPS Servername is based on the value noted from Step 10 of <u>Installing the OPS kit on the remote</u> server (6-20).

Note XML files can be edited using Microsoft Notepad.

4 Save the file.

Editing the Bootstrap.xml file

I Navigate to the following path.

[DeviceClientInstallFolder]\Configuration

2 In bootstrap.xml, change http to https.

<Server>https://OPS Servername or IP/webapi/scripts/omisapiu.dll </ Server>

3 This OPS Servername is based on the value from noted from Step 10 of <u>Installing the OPS kit on the</u> remote server (6-20).

Configuring HP FutureSmart, OZ, and PRO devices to use the OPS Server Certificate for HTTPS environments

This section describes how to configure FutureSmart and OZ devices to use the certificate created during the OPS Server installation for HTTPS support. This is a quick and convenient way to set up HTTPS without the need to use the MakeCert process.

Before continuing, verify that the OPS Server is installed and working as described in Chapter 7: <u>Configuring HP MFP</u>. <u>Devices</u> (6-1).

Exporting the certificate to the Embedded Device Client directory for FutureSmart and OZ devices

When an environment includes HP Pro devices and FutureSmart or OZ devices, the certificate used for HTTPS communication must be an OPS Server certificate, not a MakeCert-generated certificate.

Important As a requirement, the OPS Server must be correctly installed and configured before obtaining the OPS Server certificate.

- I Navigate to C:\Program Files (x86)\Hewlett-Packard\OPS and copy the certificate saved from previous steps.
- 2 Navigate to and then paste the certificate into [DeviceClientInstallFolder]\Certificate\OPS.

All FutureSmart and Oz devices will use this certificate for HTTPS communication.

6-29

Section 7: Configuring Xerox Devices

The Xerox devices support all of the features in the Device Client, with some modifications to the standard configuration process. See the sections below for the modified configuration settings.

This section includes

- <u>Supported Xerox devices</u> (7-1)
- <u>Configuring HTTPS support</u> (7-2)
- <u>Configuring Xerox device authentication on the device</u> (7-6)

Note Verify that <u>Section 3: Installation</u> has been completed and that the Device Client is installed.

Supported Xerox devices

AccuRoute supports the Embedded Device Client on all devices listed in this section. Consult Xerox to determine compatible firmware versions for supported devices.

Table 7-1: List of supported Xerox devices

| Device | Qualified by Upland AccuRoute | Device Client Version | Software Version |
|-----------------|--|--|--|
| 550/560 | Color 560 | 1.5 | 55.30.61, ESS1.207.3, IOT 64.18.0, IIT 6.16.1, ADF 12.11.0, SJFI3.0.18, SSMI1.16.0 |

Table 7-1: List of supported Xerox devices

Note All Xerox devices must be set to SSL mode within the device's internal Web server. See Xerox for further instructions.

Configuring HTTPS support

In order to use HTTPS protocol communication when sending documents from the device to the AccuRoute Server, follow the instructions in this section to create a CA Certificate using Microsoft Certificate Services and enable SSL.

Note If you are using HTTP, skip this section and go to Section 5: Required Configuration.

Also note, HTTP and HTTPS cannot coexist and configuration for the device communication must be either HTTP or HTTPS for all devices.

If you require HTTPS support, you can follow the instructions in this section to set up a CA certificate with the Microsoft Certificate Services and enable SSL. Otherwise, use a certificate from a trusted certificate authority. The certificate must be installed on the IIS system.

Complete the following steps in the order presented:

Downloading the MakeCert executable (7-3)

Creating the certificate (7-3)

Installing the certificate to Internet Information Services (IIS) (7-3)

Creating an SSL binding (7-4)

Requiring SSL for the virtual web sites (7-4)

Enabling directory browsing is IIS (7-4)

Verifying the SSL binding (7-5)

Verifying HTTPS browsing (7-5)

Editing the OmISAPIU.xml file (7-5)

Editing the Bootstrap.xml file (7-6)

7-2

Requirements for setting up a CA certificate

You must meet the following requirements when setting up a CA certificate:

- Web server that meets the requirements for the ScanFacts Intelligent Device Client.
- Windows user account that belongs to the Administrators group.

Downloading the MakeCert executable

Copy makecert.exe to your local computer. The MakeCert executable is available as part of the Windows SDK. For instructions on how to download the Windows SDK and the MakeCert executable, see the <u>Microsoft</u> <u>documentation</u>.

When the download is complete, copy the executable to a shared network folder from where you can access it.

Creating the certificate

- I Open a **Command Prompt (Admin)** and navigate to the directory where you saved the MakeCert executable (makecert.exe) on your local computer (typically on the C drive).
- 2 Run the following command (as Administrator):

makecert.exe -r -pe -n "CN=fully_qualified_domain_name_of_iis_server"
-b 01/01/2006 -e 01/01/2023 -ss my -sr localMachine -sky exchange -sp
"Microsoft RSA SChannel Cryptographic Provider" -sy 12
"fully qualified domain name of iis server.cer"

fully_qualified_domain_name_of_iis_server should be in this format:
 servername.domain.com

Note There is a space at the end of the first three lines shown above.

When the command is run properly, the system will display a message indicating that it succeeded.

Installing the certificate to Internet Information Services (IIS)

You must now install the certificate from the root of C.

- I Select and right-click the certificate.
- 2 Select Install Certificate. The Certificate Import wizard is displayed.
- 3 Select NEXT.
- 4 Select Place all certificates in the following store and select BROWSE.
- 5 Select Trusted Root Certification Authorities and select OK.
- 6 You will be prompted with a security warning:

You are about to install a certificate from a certification authority (CA) claiming to represent... Do you want to install this certificate? Select YES. A message indicating the import was successful should display.

Creating an SSL binding

- I Open the IIS Manager.
- 2 Click on the **Default Website** and locate **Bindings** under **Edit Site** (in the top-right corner of the window).
- 3 Click Bindings. The Site Bindings dialog opens.
- 4 Click HTTPS type and select Edit. The Edit Site Bindings dialog opens.

Note If no HTTPS appears in the SSL bindings list, you need to add one. To do so, in the **Site Bindings** dialog, instead of **Edit**, click the **Add** button. The **Add Site Binding** dialog opens. Select **Type: https, IP** address: All Unassigned, and Port: 443. From the **SSL certificate** drop-down menu, select the certificate that you created earlier and click **OK**. Continue at Step 6 below.

- 5 In the SSL certificate drop-down, select the certificate that was created earlier and click OK.
- 6 Click Close to exit the Site Bindings dialog.

Requiring SSL for the virtual web sites

- I Open the IIS Manager.
- 2 Expand Local machine > Default WebSite and select Device Client.
- 3 Open SSL Settings and check Require SLL. Under Client certificates, select Ignore.
- 4 Expand Local machine > Default WebSite and select WebAPI.
- 5 Open SSL Settings and check Require SLL.
- 6 Under Client certificates, select Ignore.

Enabling directory browsing is IIS

- I Open the IIS Manager.
- 2 Expand Local machine > Default WebSite and select Device Client.
- 3 Double-click on Directory browsing.
- 4 In the right Actions field, select ENABLE.
- 5 Expand Local Machine > Default Web Site and select WebAPI.
- 6 Double-click on Directory browsing.
- 7 In the right Actions field, select ENABLE.

Verifying the SSL binding

- I Open the IIS Manager.
- 2 Expand Local machine > Default WebSite and select WebAPI.
- 3 Click on Browse *:443 (HTTPS) under Manage Application/Browse Application (located at the top right corner of the IIS dialog).

You will see this message: There is a problem with this website's security certificate.

Note This message is expected and safe to ignore.

- 4 Click the **Continue to this website (not recommended)** option.
- 5 Verify that the **IIS 7** dialog opens.

Verifying HTTPS browsing

- I Open the IIS Manager.
- 2 Expand the **Default Web Site**.
- 3 Expand Device Client.
- 4 Select the **Configuration** folder.
- 5 In the actions pane, select Browse*:443(https).
- 6 Select Continue to this website (not recommended).
- 7 Verify that the local page is displayed:
 - ...\DeviceClient\Configuration\
- 8 In the IIS Manager with **Default Web Site** expanded, expand **WebAPI**.
- 9 In the actions pane, select Browse*:443(https).
- 10 Select Continue to this website (not recommended).
- **II** Verify that the localhost page is displayed:

...\WebAPI\

Editing the OmISAPIU.xml file

I Navigate to the following path.

[ServerInstallFolder]\WebAPI\WebAPI\Scripts

2 In OmISAPIU.xml, find the FileTransfer node. Replace the IP address with the fully qualified domain name. Also, change http to https.

<FileTransfer>https://fully_qualified_domain_name/WebAPI/FileTransfer/</FileTransfer>

Section 7: Configuring Xerox Devices

Note XML files can be edited using Microsoft Notepad.

3 Save the file.

Editing the Bootstrap.xml file

I Navigate to the following path.

[DeviceClientInstallFolder]\Configuration\

2 In bootstrap.xml, change http to https.

<Server>https://fully_qualified_domain_name/webapi/scripts/omisapiu.dll </Server>

- 3 Save the file.
- 4 Reset IIS.

Configuring Xerox device authentication on the device

The following procedure uses an example configured for a ColorQube 8700S. Other devices will have slight differences in the terminology used within the device's web server.

- **a** Access the device Internal Web server and log in.
- b Click the Properties tab. Then, select Connectivity > Protocols or Setup (depending on the OS version) > LDAP.
- c Click Add New.

| Status Jobs Print Scan Address Book Properties Support | |
|--|--------------------------|
| Properties LDAP Server | |
| Configuration Overview Description | |
| General Setup | |
| Connectivity Server Information | |
| Physical Connections | |
| Protocols O IPv4 Address | Friendly Name |
| AppleTalk C IDus Address | |
| FTP / SFTP Filing | |
| | IP Address: Port |
| IP (Internet Protocol) LDAP | 0 . 0 . 0 . 389 |
| LDAP LPR/LPD | 0.0.0.389 |
| Microsoft Networking | Backup IP Address : Port |
| NetWare | |
| NTP | 0 . 0 . 0 . 389 |
| Proxy Server | |
| Raw TCP/IP Printing | |
| SLP LDAP Server | |
| SMB Filing SMTP (E-mail) Exchange | |
| SMP (C-man) | |
| SCDR | |
| WSD (Web Services on Device) Optional Information | |
| Services Search Directory Root | |
| Accounting | - |
| >Security | |
| Login Credentials to Access LDAP Server | Login Name |
| © None | |
| | |
| C Authenticated User | Password |
| C System | |
| | |
| | |
| | |
| | Retype password |
| | Retype password |
| | Ketype password |

- d In the General Information or Server Information section (depending on the OS version):
 - ▲ Select IPv4 Address.
 - Enter a name in the Friendly Name text box.
 - ▲ Select ADS in the LDAP Server drop-down.
- e In the **Optional Information** section:
 - ▲ Enter the Search Directory Root (DC=DomainName, DC=COM).
 - ▲ Select System for the Login Credentials to Access LDAP Server.
 - Enter the DomainName or Login Name (depending on the OS version).
 - Enter the **Password**.
 - Select the option to Select to save new password. (If you return to this window, the login information will display as blank.)
- f Apply SSL and other settings, if necessary. Defaults were used in this example.

| SSL | |
|--|---------------------------------|
| Enable SSL (Secure Socket Layer) | |
| Validate Repository SSL Certificate (trusted, not expired, correct FQDN) | |
| View Trusted SSL Certificates | |
| Trusted SSL Certificates | |
| No Validation | |
| View/Save | |
| Maximum Number of Search Results | LDAP Referrals |

| LDAP Servers | Personalization | 🧼 Required; Configured | 🕖 Edit | |
| Service Registration | (Convenience Link) | Optional; Configured | 🖌 Edit | |

Note Under Configuration Settings, if **LDAP Servers > Personalization** shows a red exclamation mark, you need to define which LDAP server to use. (This might not be necessary.) If there is a red exclamation mark, select **LDAP Servers**. Then, click the **Edit** button and choose the LDAP server you have configured.

• Verify the LDAP server you configured is in the device list of LDAP servers. In the left menu under **Protocols**, select **LDAP** to display the LDAP Servers.

- s Click Apply.
- t On the main page of the Device Internal Web server, select **IP (Internet Protocol)** under the **Protocols** heading in the left menu.
- u Click the **DNS** tab and verify that the **Requested Domain Name** and **DNS Server** Addresses match the Upland AccuRoute DNS server settings. Click Apply when finished.
- v Reboot the device.

_____ 8-1

Section 8: Using the Web Jetadmin Application to Install Embedded Device Client Buttons on HP Devices

The information in this section will allow you to administrate and install AccuRute Embedded Device Client buttons onto HP devices using the Web Jetadmin application. This section includes:

Supported Devices (8-1) Exporting the XML files (8-2) Manually importing a certificate (8-3) Installing AccuRoute Embedded Device Client buttons (8-4)

Supported Devices

The following devices are supported:

Table 8-1: AccuRoute Embedded Device Series Matrix

| Device | Operating System | Device |
|----------------------------|---------------------|---------------|
| Color LaserJet CM 4730 MFP | Oz | Color LaserJe |

Exporting the XML files

Complete the following procedure for AccuRoute to configure the AccuRoute Embedded Device Client with the appropriate settings for your environment.

- I Once the configuration is complete (as described in <u>Installation</u>, <u>Creating Device Groups on the</u> <u>AccuRoute Server Administrator</u> and <u>Installing Buttons on a New Device</u>), right-click the **Devices** group to which you intend to deploy buttons. Select **Export to Web Jet Admin**.
- 2 You can now store the XML files by browsing to a network folder or creating a new folder destination.

Browse:

| Browse For Folder Select folder to store Web Jet Admin export | X |
|---|---|
| ■ Desktop Libraries | |
| Folder: Administrator Make New Folder OK Cance | |

Make New Folder:

| Browse For Folder | × |
|--|---|
| Select folder to store Web Jet Admin export | |
| Image: Second system Image: Second system <td></td> | |
| Folder: New folder Make New Folder OK Cancel | |

3 Click **OK** and verify the correct buttons are represented in XML format.

| anize 👻 Include in | library ▼ Share with ▼ New folder | | | 🝷 🔯 Search New |

Manually importing a certificate

For HTTPS support, you need to import the client certificate into the device Embedded Web Server (EWS) before installation, as follows:

- I Save the certificate to be used for HTTPS communication to a network-accessible location.
- 2 Open and log into the EWS of the device.
- 3 In the Security tab, select Certificate Management.
- 4 Under Certificates, select Choose File > Browse.

Section 8: Using the Web Jetadmin Application to Install Embedded Device Client Buttons on HP Devices

- 5 Browse to the location where you saved the certificate and select **Open > Import**.
- **6** Verify that the certificate appears under the **Certificates** section within the device Embedded Web Server.

Installing AccuRoute Embedded Device Client buttons

Once you can discover devices using the Web Jetadmin application, you can install the buttons using the Web Jetadmin application.

I Right-click the **Group** node and select **New group**.

The **Specify group options** page appears.

| Create Group | | | ? > |
|-----------------|---------------------------------|---|--------------|
| pecify gro | up options | | |
| Group identific | ation | | |
| Group name: | 02 | | |
| Parent group: | Groups | | |
| Group member | ship type | | |
| C Automatic | are added or removed b group | y the user) or removed based on filter criteria) | |
| Configure gro | oup properties now | | |
| | | | Next> Cancel |

2 Enter the name of the new group that you will use to group similar devices for button installation. (Preferably, this is a device group name that will allow the administrator to easily configure similar firmware or button functionality installations such as Jedi, Oz, etc.)

3 Click **Next** and verify that the group name is correct. The **Confirm** page appears, showing the settings for the group.

| Create Group onfirm | | ĺ |
|------------------------|--------------------------|---------------------------|
| Settings | | |
| Group name: | Oz | |
| Parent group: | <no parent=""></no> | |
| Description: | <not specified=""></not> | |
| Contact: | <not specified=""></not> | |
| Membership type: | Manual (0 devices) | |
| Policies: | 0 | |
| | | |
| | | < Back Create Group Cance |

- 4 Click Create Group and then Done.
- 5 Right-click the newly-created group and select Add devices to group.

Note For more options to use the Web Jetadmin device filters to find or add devices, consult Upland AccuRoute's Web Jetadmin team for a complete Web Jetadmin installation guide.

Section 8: Using the Web Jetadmin Application to Install Embedded Device Client Buttons on HP Devices

The **Select Devices** page appears.

Section 9: Testing

The following section provides a procedure for testing the Routing Sheet feature and the Device Administrator user interface. This will ensure that your installation is operational. This section includes:

Testing the Routing Sheet feature (9-1)

Testing the Device Administrator user interface (9-2)

Testing the Routing Sheet feature

- I Create at least one Distribution Rule with your user account.
- 2 Generate and print a Routing Sheet using the AccuRoute Desktop or the AccuRoute Web Client application.
- 3 Assemble a test document. Add the Routing Sheet to the front of the document and go to the device. The main screen looks like this:

- 4 Load the document into the document feeder.
- 5 Press Routing Sheet. (If this feature is not visible, use the scroll bar to find it.)

Note If you have configured prompts, you will see the them now. Enter the appropriate prompt values and click **Next**.

The device indicates it is ready to scan. When scanning from the Routing Sheet button, always keep the Routing Sheet first, followed by other documents.

6 To begin scanning, press **Start** on the display screen or on the hard keypad.

Alternately, to change the scan attributes, click More Options.

For example, you can specify the page size for the scanned document. The default page size is Letter. After you have made your modifications, click **Start** to begin scanning.

The scan job starts. A progress indicator shows the scan job status

To stop the scan job, press **Cancel Job**. Otherwise wait for the job to finish. When scanning is complete, the device shows the scan completed message.

The message is transferred to the AccuRoute server via HTTP/HTTPS where it is processed and routed to the intended recipient. If the document does not arrive at the destination, troubleshoot the setup. Go to Section 10: Troubleshooting.

- 7 To scan another document using the Routing Sheet option, click **Back**. To end the session and go back to the main AccuRoute menu, click [6] or the **OK** button.
 - Important If you see that the AccuRoute server cannot decipher or interpret the Distribution Rule instructions on the Routing Sheet, you must change the device setting from **mixed** to **text**. For instructions, see <u>Troubleshooting issues when the AccuRoute server cannot</u> <u>decipher the Distribution Rule instructions in a Routing Sheet</u> (10-6)

Testing the Device Administrator user interface

To test the Device Administrator user interface, complete the procedure for Creating a group of devices (4-1).

You can set up tests to test all authentication types at once by configuring groups on the AccuRoute server, with each group having a different authentication type:

- Email
- PIN
- Login
- Device

Then, test one device by uninstalling and reinstalling from each authentication type group to verify that all authentication types will work at once.

Section 10: Troubleshooting

This section includes:

Detecting workflow issues (10-2) Troubleshooting the delivery mechanism (10-2) Troubleshooting messages on the AccuRoute server (10-3) Troubleshooting the Web server (10-5) Troubleshooting the multifunction device (10-5) Troubleshooting Permission problems when setting up Embedded Device Client for HP OXPd (10-5) Troubleshooting permission problems when setting up Embedded AccuRoute for Intelligent Devices. (Upland AccuRoute ISAPI Web Server Extension) in a cluster (10-6) Troubleshooting problems associated with applying all additional scan attributes (10-7) Troubleshooting problems when scanning large documents (10-7) Troubleshooting problems when scanning 100+ color pages (10-8) Troubleshooting an SNMP error (10-9)

If you cannot resolve an issue, contact Upland AccuRoute support.

10-1

Detecting workflow issues

After a document has been scanned on the device, the document should arrive at its destination momentarily but can take up to several minutes when the server workload is high. If a document does not arrive at its destination within a reasonable period of time, begin troubleshooting the environment. Upland AccuRoute recommends troubleshooting the workflow in reverse order because this is the easiest way to troubleshoot the setup on your own.

When a document does not arrive at its destination, troubleshooting starts with the delivery mechanism such as the mail server or DMS application, and then continues to the AccuRoute server, the AccuRoute Embedded Device Client for HP OXPd, the Web server, and the device.

Troubleshooting the delivery mechanism

When the AccuRoute server finishes processing a message, an outbound connector routes the message directly to its destination or passes the message onto a delivery agent. If a delivery agent such as a mail server or DMS application is involved in the delivery process, do some basic troubleshooting on the delivery agent. If the delivery agent is functioning correctly, troubleshoot the message on the AccuRoute server. Continue to Troubleshooting messages on the AccuRoute server.

Troubleshooting messages on the AccuRoute server

There are two important questions that can be resolved when troubleshooting a message on the AccuRoute server:

- Was the message submitted to the AccuRoute server?
- Assuming the message was submitted to the AccuRoute server, what caused the delivery failure? The
 state and status of the message, along with details in the message journal, provide some important
 clues.

Start troubleshooting by trying to locate the message on the AccuRoute server:

- I Click Start > All Programs > Upland > AccuRoute Server > AccuRoute Server Administrator.
- 2 In the console tree, expand the AccuRoute Server Administrator and go to [ServerName] > Messages.
- 3 Look for the message in the In Process queue:
 - a Click In Process.
 - b View All Items.

- c Sort all items by the date submitted.
- **d** Look for the message.
- Message found View the message journal to determine the current state and status of the message. Then monitor the components and confirm that the message is moving through the processing queues on the AccuRoute server. If the AccuRoute server stops processing the message (for example, the message seems to be stuck in a processing queue), restart all the Upland AccuRoute services.

| Re | cipient Properties | × |
|----|--|--|
| | General Attachments Re | cipient Sender Confirmations Journal |
| | Date | Journal Entry |
| | 10/05/2005 09:32:57 AM | Dispatch: Fax number normalized to +16038901 |
| | 10/05/2005 09:32:57 AM 10/05/2005 09:32:57 AM | Dispatch: Matched rule All fax numbers to Telco Dispatch: Processing action for rule "All fax num |
| | 10/05/2005 09:32:57 AM | Compose: Started |
| | 10/05/2005 09:32:58 AM | Compose: (localhost - localhost) Document=cert |

• Message not found - Go to step 4 and look for the message in the History queue.

- 4 Look for the message in the History queue:
 - a Click History.
 - b View All Items.

- c Sort all items by the date submitted.
- **d** Look for the message.
- Message found View the message journal to determine the cause of the failure.

| Re | cipient Properties | × |
|----|------------------------|---|
| | General Attachments Re | cipient Sender Confirmations Journal |
| | Date | Journal Entry |
| | 10/05/2005 09:32:57 AM | Dispatch: Fax number normalized to +16038901 |
| | 10/05/2005 09:32:57 AM | Dispatch: Matched rule All fax numbers to Telco |
| | 10/05/2005 09:32:57 AM | Dispatch: Processing action for rule "All fax num |
| | 10/05/2005 09:32:58 AM | Compose: Started |
| | 10/05/2005 09:32:58 AM | Compose: (localhost - localhost) Document=cert |
| | 10/05/2005 09:33:07 AM | Compose: (localhost - localhost) Document=400 |
| | 10/05/2005 09:33:20 AM | Compose: Completed |
| | 10/05/2005 09:33:21 AM | OmtoolConnector: Destination connector failed t |
| | 10/05/2005 09:33:22 AM | Dispatch: Fax number normalized to +16038901 |
| | 10/05/2005 09:33:22 AM | Dispatch: Routing complete |

If the message failed, correct the issue and send the message again. Contact Upland AccuRoute if you are unable to resolve the issue.

If the journal states that AccuRoute server delivered the message but it still has not arrived at its destination, this indicates that the AccuRoute server transferred the message to the delivery agent successfully. Do some advanced troubleshooting on the delivery agent to determine why the message is not being delivered to its destination. Contact Upland AccuRoute if you are unable to resolve the issue.

Troubleshooting the Web server

The Embedded AccuRoute for Intelligent Devices Installation Guide has instructions on troubleshooting the Web server. For documentation related to AccuRoute v6.1, consult the <u>AccuRoute v6.1 documentation page</u>.

If you cannot identify any issues with the Web server, troubleshoot the device. Continue to <u>Troubleshooting the</u> <u>multifunction device</u>.

Troubleshooting the multifunction device

After troubleshooting all other components in the workflow, troubleshoot the device. Consult the HP documentation.

Troubleshooting .NET error when installing AccuRoute Embedded Device Client for HP OXPd

Problem:

When installing AccuRoute Embedded Device Client for HP OXPd vI.6 on a Windows 2008 R2 system, this message appears.

.NET Framework 3.5.1 must be installed using Server Roles before continuing.

Solution:

.NET Framework v3.5.1 is not installed in your system. Install .NET Framework v3.5.1 before proceeding with the AccuRoute Embedded Device Client for HP OXPd v1.6 installation.

For information on how to install .NET Framework v3.5.1, consult:

http://blogs.msdn.com/b/sqlblog/archive/2010/01/08/how-to-install-net-framework-3-5-spl-on-windows-server-2008-r2-environments.aspx

Troubleshooting permission problems when setting up Embedded AccuRoute for Intelligent Devices (Upland AccuRoute ISAPI Web Server Extension) in a cluster

Problem:

Issues related to permissions occur when setting up Embedded AccuRoute for Intelligent Devices (Upland AccuRoute ISAPI Web Server Extension) in a cluster environment.

Solution:

When setting up Embedded AccuRoute for Intelligent Devices (Upland AccuRoute ISAPI Web Server Extension) in a cluster, you must configure permissions for the Anonymous user.

Procedures for setting up Embedded AccuRoute for Intelligent Devices in a cluster are provided in the appendix titled, Setting up an AccuRoute server cluster, in the <u>AccuRoute v6.1 Server Installation Guide</u>.

Troubleshooting issues when the AccuRoute server cannot decipher the Distribution Rule instructions in a Routing Sheet

Problem:

When using an HP device to scan a document with a Routing Sheet, the AccuRoute server cannot decipher the instructions on the Routing Sheet and process the document.

Solution:

Change the device setting from scanning a Mixed document to scanning a Text document. To do so:

- I Open a Web browser and enter the IP address of the device.
- 2 Click Log In and login to the device using the device administrator name and password.
- 3 Click Digital Sending > Preferences.
- 4 For **Document Type**, change the chosen option from **mixed** to **text**.

Troubleshooting problems associated with applying all additional scan attributes

Problem:

All additional scan attributes are configured together (Darkness, back ground cleanup, contrast, sharpness, Heavy originals), and the following message appears when attempting to scan a document at the HP device:

The action cannot be performed because options specified in the configuration file are not supported by this device. Try again on a different device.

Solution:

This message is displayed because the scan options are not supported by the device. Consult your HP manual or with your Administrator and find out which scan options are supported for your device model. The list of scan options commented in the configuration file are not supported by all the devices. Only those options that are supported by a particular device model should be un-commented and used.

Troubleshooting problems when scanning large documents

Problem:

After a document is scanned, the message indicating scan completion with delivery information is missing. However, the document is routed to the AccuRoute server for processing.

Solution:

Configure the following:

- Increase the sleep schedule from 10 minutes to the maximum, which is 4 hours
- Increase the inactivity timeout in the device Embedded Web Server to 300 seconds
- Increase the Content length in Internet Information Service Manager (IIS)

To increase the sleep schedule:

- I Log in to the Embedded Web Server.
- 2 Select the General tab.
- 3 In the left pane, locate **Sleep Schedule**.
- 4 Increase the Sleep Delay to the maximum allowable time: 120 minutes. Click Apply.

To increase the inactivity timeout in the device Embedded Web Server:

- I Log in to the Embedded Web Server.
- 2 Select the General tab.
- 3 In the left pane, locate Control Panel Administration Menu.
- 4 In the center pane, expand Administration.

- 5 Click on **Display Settings**.
- 6 Locate **Inactivity Timeout** and increase the value to 300 seconds.

To increase content length in IIS:

- **Note** The content length must be modified on both the Upland AccuRouteDXPWebApp1.6 and the Upland AccuRouteWebAPI sites.
- I Go to the Internet Information Services manager and select **OXPI.6** under **Sites**.
- 2 Double-click on **Request Filtering**.
- 3 Select Edit Feature Settings under the Actions menu.
- 4 Increase the value in **Maximum allowed content length**. The default value is 30000000. Modify the value to **3000000000**.
- 5 Select WebAPI under Sites.
- 6 Double-click on **Request Filtering**.
- 7 Select Edit Feature Settings under the Actions menu.
- 8 Increase the value in **Maximum allowed content length**. The default value is 30000000. Modify the value to **3000000000**.
- 9 Reset IIS.

Troubleshooting problems when scanning 100+ color pages

Problem:

When scanning more than 100 color pages, it takes additional time for the scans to arrive on the AccuRoute server.

Solution:

To improve performance.

- I Go to the Internet Information Services (IIS) manager configured for AccuRoute 6.1.
- 2 Open the following file for editing (such as with Notepad):

[DeviceClientInstallFolder] \OXP1.6

3 Locate <httpRuntime maxRequestLength="500000" executionTimeout=1800>. Change the executionTimeout to 5400:

<httpRuntime maxRequestLength="500000" executionTimeout=5400>

4 Save the file and restart IIS.

Troubleshooting an SNMP error

Problem:

When you perform an nvram full init, the Set Community string and the Get Community string are both set to public. However, when you set the admin password, it sets the Set Community string to the admin password. The networking tab of the Embedded Web Server of the device does not display the value if it is set. Instead it shows asterisks (***). The best practice is to set the value to blank, as it will assume public for both and display the value as "Not Set (default to public)."

Solution:

To display the value.

- I Log in to the Embedded Web Server.
- 2 Select the **Networking** tab.
- 3 Choose settings under security.
- 4 Under SNMPc1/2 on the Status tab, there are two fields: Get Community Name and Set Community Name.

Change the community name values by setting the values as blank for **Get Community Name** and **Set Community Name**.

5 Click **Apply** to remove any value. Now, no values are set for the two fields.
